NEW DELHI

FEB., 1964

**SYNOPSIS OF POCKET-BOOK ON TRANSPORT IN INDIA
1972-73**

The publication brings together in one place, key statistics relating to all modes of transport *Viz* Roads and Road Transport, Railways, Ropeways, Air Transport, Ports and Shipping, Inland Water Transport and other modes of transport including pipeline and bicycles. It is an annual publication which was started in 1968 and this is the sixth issue and gives information for 1972-73.

This Pocket Book is intended to serve as a compact source of reference on the transport economy of India. It is divided into three parts : Part I describes the National economy and Transport resources and Part II the individual transport systems, Air, Rail, ropeways, Road, Inland Water Transport and Coastal and Overseas Shipping. Part III deals with Plan outlays and expenditures on the different modes of transport and also gives comparative statistics on transport in different countries to the extent available. This publication, we hope, will meet the needs of those who do not have easy access to more detailed publications for reference.

N. V. A. NARASIMHAM,
Director, Transport Research,
Ministry of Shipping and Transport.

LIST OF STATISTICAL TABLES

PART I

TRANSPORT AND NATIONAL ECONOMY

SECTION 1

ECONOMIC STRUCTURE AND ACTIVITIES

<i>Table No.</i>		<i>Page No.</i>
1 (1)	Decennial growth of population of India in the rural and urban areas	9
1 (2)	Population, area and administrative units—statewise	10
1 (3)	Percentage distribution of villages in India by Principal modes of conveyance used to reach some nearest centres of health, education, communication and administration	11
1 (4)	Average distances of villages in India to nearest centres of health, education and communication (All-India)	12
1 (5)	Percentage distribution of estimated number of villages by distance from the nearest centre	13
1 (6)	Employment in the public sector	14
1 (7)	Employment in the private and public sectors	16
1 (8)	Net domestic product at current and constant prices (state-wise).	18
1 (9)	National economic structure and activities; selected indices	20

SECTION 2

TRANSPORT RESOURCES

2 (1)	Roads, navigable lengths of waterways and motor vehicles on road (state-wise)	33
2 (2)	Crude oil and Product Pipe Lines in India	34
2 (3)	Refinery Production (1965 to 1972)	35
2 (4)	Estimated Industry-wise consumption of Fuel Oils	36
2 (5)	Price build up of Petroleum products as on 1-1-1973	37

<i>Table No.</i>		<i>Page No.</i>
2 (6)	Retail sale price of petrol and high speed diesel oil in various towns in India as on 31st December, 1972	41
2 (7)	Index numbers of wholesale prices of selected commodities used in road and road transport in India	44
2 (8)	Ratio of stocks to Production of selected commodities	46
2 (9)	Production of rolling stock of railways in India	48
2 (10)	Production of motor vehicles and Trailers by Types (All India)	49
2 (11)	Indigenous contents of motor vehicles and engines manufactured in India	51
2 (12)	Import of motor vehicles and spare parts (All-India)	53
2 (13)	Imports of crude oil and petroleum products during 1969—72	55
2 (14)	Exports of petroleum products for the years 1969 to 1972	56
2 (15)	Crude oil and Petroleum Products Imported during 1961 to 1972	57

PART II

TRANSPORT SYSTEMS

SECTION 3

AIR TRANSPORT

3 (1)	Fleet of Air India and Indian Airlines	64
3 (2)	Passengers traffic—Domestic and International carried by Indian Air Transport Undertakings	65
3 (3)	Goods traffic of National Air Transport Undertakings	66
3 (4)	Traffic Revenues of National Air Transport Undertakings	67
3 (5)	International Air Traffic of India	68

SECTION 4

RAIL TRANSPORT AND ROPE-WAYS

4 (1)	Summary of working of railways	72
4 (2)	Route length, passenger kilometres, tonne kilometres and earnings derived therefrom by Indian Railways (Including Non-Government railways)	75

**Table
No.**

**Page
No.**

4 (3)	Route kilometrage of Government railways	76
4 (4)	Zone-wise route length and running track of Government railways	78
4 (5)	Staff employment in Government and non-Government railways	80
4 (6)	Rolling stock owned by Government Railways	81
4 (7)	Usage of engines, vehicles and wagons on Government railways	83
4 (8)	Originating traffic, net tonne-kilometres and average load for principal commodities for Government railways	84
4 (9)	Purchase of stores by Indian Railways	85
4 (10)	Financial results of the Working of Government Railways	86
4 (11)	Average fares and freights on Indian Government Railways	87
4 (12)	Cost of operation of Rope-ways	88

SECTION 5

ROADS AND BRIDGES

5 (1)	Records of Road Lengths—Agency-wise	103
5 (2)	Total length of Government Roads in India by agency in which they are vested (All-India)	105
5 (3)	Road Lengths by surface (Agency-wise)	106
5 (4)	Mixing links on National Highways (State-wise)	122
5 (5)	National Highways Lengths by nature of surface and by widths and surfaced (State-wise)	123
5 (6)	Growth of Road Lengths of National Highways widths (total and surfaced) (State-wise)	125
5 (7)	Growth of Road Lengths in Urban Areas (Total and Surfaced) (State-wise)	128
5 (8)	Number of Major Bridges on National Highways (State-wise)	131
5 (9)	Maximum Laden weights permitted for vehicles on National Highways in States/Union Territories	132

<i>Table No.</i>		<i>Page No.</i>
5 (10)	Maximum Laden Weights permitted for vehicles on State-Highways	134
5 (11)	Number of Avenue Trees on National Highways	136
5 (12)	Expenditure on Roads by States and Central Government (All-India)	137
5 (13)	Central and State Expenditure on roads compared to Central and State revenues from Road Transport (All-India)	138

SECTION 6

MOTOR TRANSPORT ADMINISTRATION

6 (1)	Growth of motor vehicles on the road in India	144
6 (2)	Total number of different motor vehicles on road at the end of 31st March, 1969, 1970, 1971 and 1972	146
6 (3)	Number of stage carriages on road by seating capacity	162
6 (4)	Number of private and public carrier goods vehicles on road by carrying capacity	164
6 (5)	Number of driving licences issued (newly issued and renewed during the year ending 31st March, 1970, 1971 and 1972)	167
6 (6)	Distribution of operators according to fleet size as on 31st March, 1970, 1971 and 1972.	170
6 (7)	Number of motor vehicles plying on Inter-State routes with regular temporary permits issued by each State (as consist April, 1970, 1971 and 1972)	176
6 (8)	Type of commodities moved on arterial roads in the country and their average load	179
6 (9)	Distribution of trips made by goods vehicles on arterial roads according to length of haulage	180

SECTION 7

TAXATION ON MOTOR TRANSPORT

7 (1)	Revenue from Road Transport in India	184
7 (2)	Average Revenue per vehicle during 1970-71	186
7 (3)	Rate of Sales Tax on Motor-Spirit and High Speed Diesel Oil as on 31-12-1970—State-wise	187

Table
A-2.

7 (4)	Rate of Sales Tax on Motor Vehicles and Motor Vehicles Spare Parts as on 31-12-1970 (State-wise)	188
7 (5)	Goods and Passenger Tax as on 31st March 1971 (State-wise)	189
7 (6)	Annual Vehicle Tax on Trucks as on 31st March 1971 (State-wise)	190
7 (7)	Annual Vehicle Tax on Passenger buses as on 31st March, 1971 (State-wise)	192

SECTION 8

ACCIDENTS IN TRANSPORT

8 (1)	Motor Vehicle Accidents during 1971 (Month-wise)	197
8 (2)	Motor Vehicles Accidents during 1971 by Class of Motor Vehicles involved	199
8 (3)	State-wise Rates of Accidents by class of Motor Vehicles on Road, 1971	201
8 (4)	Motor Vehicle Accidents during 1971 by Nature of Accidents	203
8 (5)	Motor Vehicles Accidents during 1971 by Primary Causes of Accidents	205
8 (6)	Motor Vehicle Accidents during 1971 by Time of Day	207
8 (7)	Motor Vehicle Accidents during 1971 by Condition of Motor Vehicles Involved	208
8 (8)	Motor Vehicle Accidents in 1971 in which Commercial Vehicles were Involved - By Status of Certificate of Fitness	209
8 (9)	Rate of Casualties in Motor Vehicles Accidents during 1971	210
8 (10)	State-wise Trend of Motor Vehicles Accidents 1966-1971	212
8 (11)	Trend in State-wise Motor Vehicle Accidents rates per Thousand of Vehicles on Road (1966-71)	214
8 (12)	Trend in Railway Accidents	216

SECTION 9

PUBLIC SECTOR MOTOR TRANSPORT

9 (1)	Math, estimation of Passenger and Goods Vehicles in India	220
9 (2)	Network of Math of Passenger Vehicles (State-wise)	221
9 (3)	Distribution of Math of Goods Vehicles by type of service offered	222

9 (4)	Total Operations of Public Sector Road Transport Undertakings	224
9 (5)	Total Cost of operation on Public Sector Road Transport Undertakings	226
9 (6)	Total Cost of operation per paid kilometre	228
9 (7)	Growth of Public Sector Bus Transport	230
9 (8)	Operations of Public Sector Bus Transport by pure and composite service undertakings in Urban and Rural Areas	232
9 (9)	Cost of operation of Public Sector Bus Transport	234
9 (10)	Capital employed, Employment and Diesel Consumption in Public Sector Bus Transport	236
9 (11)	Revenue and Expenditure of individual Public sector Road Transport Undertaking	238
9 (12)	Contribution of Individual Public Sector Road Transport Undertakings to National Income	242

SECTION 10

INLAND WATER TRANSPORT

10 (1)	Navigable Waterways of India	249
10 (2)	No. and type of Inland Water Vessels registered with the State and Central Authorities	250
10 (3)	Passenger services—Operational details of the Undertakings/Navigation Companies—1972-1973.	256
10 (4)	Kerala State Road Transport Corporation—IWT Wing (Carrying Capacity of Passenger Vessels) (1965-66 to 1970-71)	260
10 (5)	Kerala State Road Transport Corporation—IWT Wing—Passenger Traffic and Earnings there from (1965-66 to 1970-71)	261
10 (6)	Cargo Services—Operational details of the Undertakings/Navigation Companies (1972-73)	262
10 (7)	Chartering by CIWTC (1972-73)	268
10 (8)	Average daily employment and annual wage bill of CIWTC (1968-1973)	269
10 (9)	Kerala State Road Transport Corporation—Employment in I.W.T. Passenger Transport (1960-71)	270

<i>Table No.</i>		<i>Page No.</i>
10 (10)	Income and Expenditure of Central Inland Water Transport Corporation, Calcutta (1968-69 to 1971-72)	271
10 (11)	Value of Fixed assets of CIWTC, Calcutta (as on 31-3-1972)	272
10 (12)	Income and Expenditure of Inland Water Transport Section Kerala State Road Transport Corporation (1965-66 to 1970-1971)	275
10 (13)	Kerala State Road Transport Corporation—IWT Wing—Operational Costs of Inland Water Transport (1965-66 to 1970-71)	276
10 (14)	Net Return on Capital Outlay Inland Water Transport Section KSRTC (1963-64 to 1970-71)	277

SECTION 11

PORTS

11 (1)	Navigational Aids on the Coast Line of Maritime States (1972-73)	286
11 (2)	No. of Major, Intermediate and Minor Ports in the Maritime States (1972-73)	288
11 (3)	Draft, Mooring and Berthing Facilities Available at Major Ports (as on 31-3-1973)	289
11 (4)	Berths, Warehouses and Transit Sheds at Major Ports (as on 31-3-1973)	290
11 (5)	Staff Position at Major and Other Ports (as on 31-3-1973)	292
11 (6)	No. of Dock Workers Registered with Dock Labour Boards at Major Ports (1972-73)	294
11 (7)	No. of Ship Calls at the Major and Other Ports (1971-72 and 1972-73)	295
11 (8)	Trends in Total Passenger Traffic (1960-61, 1965-66 and onwards)	298
11 (9)	Trends in Total Traffic in Principal Bulk and Other Commodities at the Major Ports in (1960-61, 1965-66 and onwards)	300
11 (10)	Trends in Coastal Cargo Traffic at Major and other Ports (1960-61 to 1972-73)	308
11 (11)	Trends in Foreign Cargo Traffic at Major and other Ports (1960-61 to 1972-73)	310
11 (12)	Cargo Imports of India through Ports by Countries of Origin during 1972-73	312
11 (13)	Cargo Exports of India Through Port by countries of Destination (1972-73)	316
11 (14)	Turn Round Time of Ships at Major Ports (1966-67 to 1972-73)	318

<i>Table No.</i>		<i>Page No.</i>
11(15)	Revenue Account of Income and Expenditure of Major and other Ports (1970-71 to 1972-73)	320
11(16)	Revenue Account of Income and Expenditure of Major Port by Major items (1972-73)	324

SECTION 12

SHIPYARDS

12 (1)	Production of Ship-Building Industry in Public Sector (1968-69 to 1972-73)	332
12 (2)	Ships under different stage of construction in the ship-building/repairing undertakings	334
12 (3)	Time taken for construction at different stages of Ship-building in HSL	336
12 (4)	No. of Indian and Foreign vessels repaired and earnings from these repairs	339
12 (5)	Fixed Assets of selected public Sector Ship-Building Undertakings	340

SECTION 13

MERCHANT NAVY TRAINING

13 (1)	Institutions for Merchant Navy Training	347
13 (2)	Candidates trained for different courses during the years 1965-70	348
13 (3)	No. of Merchant Navigation Officers employed on Indian Ships during 1968 to 1971	349
13 (4)	Employment Position of Seamen registered with seamen's employment offices at Bombay and Calcutta and the number of jobs	350
13 (5)	Department-wise number of registered seamen and number of jobs (1971-73)	351

SECTION 14

OVERSEAS SHIPPING

14 (1)	Indian Overseas Cargo and Passenger Traffic Carried by National Shipping Undertakings.	359
--------	--	-----

Table No.	Page No.
14 (2) Share of National and Foreign Shipping Undertakings in India's Overseas Import/Export Cargo Traffic	360
14 (3) Share of National Vessels in the Government Overseas Bulk Cargo Carried in Chartered Vessels and General Cargo Carried in Liner Vessels	362
14 (4) Share of Public and Private Sector Undertakings in the Overseas Shipping Industry	363
14 (5) Growth in Number and Tonnage of Overseas Fleet of India	364
14 (6) Distribution of Number and Tonnage of all Overseas Fleet by Type and Size of Vessels	365
14 (7) Distribution of Number and Tonnage of Vessels in the Overseas Fleet of India by type and size	367
14 (8) Distribution of Number and Tonnage Vessels in the Overseas Fleet of India by size and age	369
14 (9) Growth in Number and Tonnage of Different types of Vessels in the Overseas Fleet of India	371
14 (10) Company-wise tonnage under construction as on 1-1-1973	373
14 (11) Type-wise Indian Ship under construction in Indian and Foreign shipyards as on 1-1-1973	371
14 (12) Scheduled Overseas Routes from India, Freight Agreements and Conferences and Indian Member Lines	375
14 (13) Freight Rates for select Indian Commodities of India for various Overseas Destinations	382
14 (14) Consignment of Public Goods by water-borne Shipping from Overseas Ports in India in the years 1971-72 to 1974-75	387
14 (15) Growth of India's Overseas Traffic earnings from National Shipping	390
14 (16) Growth of Expenditure on Freight on Indian Vessels chartered in India from Foreign Companies	390
14 (17) Fuel Consumption in Tonnage Tons and per Tonnage for the Individual Vessels at Government Indian Shipping Undertakings during 1972	390

Table No.	Page No.
14(18) Shipping Development Fund—Annual Operations	403
14(19) Shipping Development Fund—Total Financial Assistance extended to the Indigenous Shipping Industry at the end of Each Year	405
14(20) Company-wise Loans Sanctioned by the Shipping Development Fund Committee (S.D.F.C.) since its inception upto 31-3-1972	406

SECTION 15

COASTAL SHIPPING

15 (1) Share of Public and Private Sector Undertakings in the Coastal Shipping Industry	415
15 (2) Coastal fleet owned and Coastal cargo both dry and wet and passenger traffic carried by Indian Shipping Industry and share of Indian Vessels thereof.	417
15 (3) Coastal Tanker Fleet Owned and Coastal Wet Cargo carried	418
15 (4) Share of Indian Shipping Industry in Coastal Cargo Traffic	419
15 (5) Distribution of Number and Tonnage of Different types of Vessels in the Coastal Fleet of India	421
15 (6) Distribution of Number and Tonnage of Different Sizes of Vessels in the Coastal fleet of India	423
15 (7) Distribution of Number and Tonnage of India Coastal Fleet by Types and Sizes of Vessels	425
15 (8) Trend in the Age Distribution of Number and Tonnage of Indian Coastal Fleet	426
15 (9) Coastal Traffic and earnings of Indian Undertakings	427
15(10) Growth of India's Coastal Traffic Earnings From National Shipping	428
15(11) Trade Ranges of Indian Coastal Conference for Liner Cargo	429
15(12) Freight Rates of Indian Coastal Conference for Various Routes and commodities	430
15(13) Nautical Distances between Selected Indian Ports	457
15(14) Rail-Distances between Important Ports on the Coasts	460
15(15) Railway Freight rates for the movement of coal, salt, cement and timber between important ports	461

PART III

SECTION 16

TRANSPORT AND FIVE YEAR PLAN

<i>Table No.</i>		<i>Page No.</i>
16 (1)	Distribution of Five Year Plan Outlays and expenditure .	465
16 (2)	Year-wise Plan Expenditure (Actual) during the Three Five Year Plans and Annual Plans 1966-67 to 1971-1972 . . .	466
16 (3)	Plan Outlays and Expenditures on Transport (All India)	469
16 (4)	Distribution of Plan Outlays by Mode of Transport (1951-1974)	469
16 (5)	Fourth Plan Outlays on Transport (State-wise) .	470
16 (6)	Plan Outlays and Expenditure on Roads	472
16 (7)	Plan Outlays & Expenditure on Road Transport (Public Sector)	473
16 (8)	Plan Outlay and Expenditure on Railway Development programmes	474
16 (9)	Plan Expenditures on Inland Water Transport (1961-1974) .	475
16 (10)	Plan Outlays and Expenditures on Port Development . . .	476
16 (11)	Plan Targets and Achievements for Coastal Merchant Fleet (1951-1979)	478
16 (12)	Plan Targets and Achievements for Overseas Merchant Fleet (1951-1979)	479
16 (13)	Progress of Different Modes of Transportation (1965 and 1968-69 to 1971-72)	480
16 (14)	Employment in Public Sector Transport Undertakings (1955-66 to 1971-72)	482
16 (15)	Contribution of Transport Undertakings to National Income	483

SECTION 17

INTERNATIONAL COMPARISONS

17 (1)	India's place in the world tonnage of Merchant Fleet . . .	487
17 (2)	Road Length by surface in different countries (1972) . . .	489
17 (3)	Road length relative to area and population in different countries (1972)	491

<i>Table No.</i>		<i>Page No.</i>
17 (4)	Expenditure on highways relative to national income country-wise (1972)	493
17 (5)	Number of motor vehicles registered in different foreign countries	494
17 (6)	Number of motor vehicles in use in certain foreign countries	496
17 (7)	Number of motor vehicles relative to road length area and population (1972)	498
17 (8)	Number of motor-coaches and buses by seating capacity in European countries and United States of America	499
17 (9)	Number of goods-vehicles on road in European countries and United States of America	502
17 (10)	Number of Goods road motor Vehicles classified by load capacity in certain European countries	509
17 (11)	Volume of domestic intercity passenger traffic by type of Transport	512
17 (12)	Volume of domestic intercity Freight Traffic by type of Transport	514
17 (13)	Goods Transport by road in certain European countries	516
17 (14)	Total number of accidents involving injuries to persons and casualties	518
17 (15)	World Tanker Fleet at the end of 1971	521
17 (16)	World Estimated Crude Oil Production	522
17 (17)	Production of cement in different countries (1966-1972)	524
17 (18)	Relative importance of the principal inland freight transport in Europe	526
17 (19)	World Motor Vehicle Registrations (1950-70)	529
17 (20)	Estimated Cost of Operating an Automobile—1970 (January) (Cents Per mile Cost)	530
17 (21)	Motor Vehicle Accidents—Number and Deaths by type of Accident 1950-1971	532
17 (22)	Production of Motor Vehicles in certain foreign countries	534
17 (23)	First Registration of Motor Vehicle in certain foreign countries	537
17 (24)	Motor Fuel consumed in certain foreign countries	540
17 (25)	Example of average annual taxation of three common categories of vehicles in certain foreign countries 1971	542

ANNEXES

Annexure No.	Page No.
I Formula indicating Road mileage in each Province as a basis to give a total of 4 lakh miles being the estimated requirement for the whole of India for the next twenty years.	743
II The National Highways Act, 1956	510
III. Summary of recommendations of the report of Chief Engineers on road Development for India (1961-61)	539
IV. Main Findings and recommendations of the Committee on rural Roads	563
V. Summary of recommendations of the Study Group on Motor Vehicles Taxation	564
VI. Summary of the recommendations made by the Road Transport Taxation Enquiry Committee	573
VII. Summary of conclusion and recommendation made by the Study group on Road Transport Financing	575
VIII. Summary of the recommendations of Study Group on viable units.	577
IX. Main conclusions and recommendations of the Committee on Transport Policy and Coordination	580
X. Resolution of Central Assembly Relating to Central Road Fund, 1929	587

PART 1
TRANSPORT & NATIONAL ECONOMY

POLITICAL AND ADMINISTRATIVE FRAME-WORK

1. India is the seventh largest country in the world with a geographical area of 3·27 million square Kms. Her land frontier is 15,168 kilometres long and coast-line about 5,689 kilometres. The distance from North to South measures some 3,219 kilometres and East to West 2,977 kilometres.

India has a written Constitution which came into force on January 26, 1950. Citizens have certain Fundamental Rights; Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to property and Right to constitutional remedies. The Fundamental rights are justiciable.

The Constitution lays down certain Directive principles of State Policy. Though not justiciable, they are regarded as "fundamental in the governance of the country." They seek to ensure that the State shall strive "to promote the welfare of the people by securing and protecting as effectively, as it may social order in which justice—social, economic and political—shall inform all the institutions of the national life."

India is a Union of 21 Federative States and 9 centrally administered Union Territories, with the President as the Head of the Union and the Governors as the Heads of the States. The President is selected by the elected members of both Houses of Parliament and Legislative Assemblies of the States for a term of five years. All executive authority of the Union, including the Supreme Command of the Defence Forces formally vests in the President and all executive actions of the Government are taken in his name. In the exercise of his functions, the President is aided and advised by the Council of Ministers (i.e. the Cabinet) with the Prime Minister as the head. The Cabinet finally determines and lays down the policy of the Government. The Cabinet is collectively responsible to the Union Parliament. The Indian Parliament consists of two Houses. The Upper House called the Council of States (Rajya Sabha) consists of not more than 238 elected representatives of States and Union Territories and 12 members nominated for their special knowledge and practical experience in the fields of literature, science, art and social services. The Lower House called the House of the People (Lok Sabha) consists of not more than 500 members elected from territorial constituencies in the States and not more than 25 members representing the Union Territories. All laws are enacted by Parliament, whose consent is also necessary for the levying of taxes and sanctioning of Government expenditure.

The States like the Centre, have a parliamentary system of government. The Governor of a State is appointed by the President and is aided and advised by a Council of Ministers headed by the Chief Minister. The Council works on the principle of collective responsibility and is accountable to the Legislature of the State. Most State legislatures have, like the Union Parliament, two Houses: The Legislative Assembly and the Legislative Council.

The Supreme Court of India consists of a Chief Justice and not more than thirteen judges appointed by the President. There is a high Court in each State which stands at the head of the State's judicial administration. Each High Court consists of Chief Justice and a number of judges appointed by the President. The judiciary is independent of the executive and the legislature.

2. Administrative units

The principal unit of administration in India is the district under a Collector and District Magistrate. As Collector he is responsible for the proper collection of revenue and for the administration of all matters connected with land except certain technical aspects of irrigation, agriculture and forestry. As District Magistrate he is responsible for the maintenance of law and order and the criminal administration of the District.

The Collector is also the Chief Development Officer of the District and is assisted in many States by Additional Collectors and District Development or Planning Officers. District Development or Planning Committees on which all members of the State Legislature and Parliament from the Districts representative of Zila Parishads and Municipal Committees and leading non-official workers are represented, ensure popular association with the formulation and implementation of development programmes.

Local self-governing institutions in India are broadly classified into two categories urban and rural. In the big cities, they are known as Corporations and in medium and small towns as Municipal Committee or Boards. The institutions looking after the civic needs of the rural areas, hitherto known as the District Boards have undergone a significant change in the recent past. With the introduction of democratic decentralisation in the States, there have been set up the Panchayats at the village level, the Block Panchayat Samitis at the Development Block level and the Zila Parishads at the district level. This three-tier machinery not only looks after the civic activities at the local level but is also associated with the preparation and execution of local development plans.

Parliament has exclusive power to make laws on matters enumerated in Union List. Parliament and also the Legislature of any Part State have power to make laws on any of the matters enumerated in the Concurrent List. Subject to the afore-mentioned clauses the Legislature of State has exclusive power to make laws for such State or any part.

hereof with respect to any of the matters enumerated in the State List. Parliament has power to make laws with respect to any matter for any part of the territory of India not included in the First Schedule not with standing that such matter is a matter enumerated in the State List. The matter directly relating to transport which are enumerated in the Union List in the Seventh Schedule of the Constitution of India are :

- (1) Railways.
- (2) Highways declared by, or under law made by Parliament to be national highways.
- (3) Maritime shipping and navigation, including shipping and navigation on tidal waters; provision of education and training for the mercantile marine and regulation of such education and training provided by States and other agencies.
- (4) Light houses, including lightships, beacons and other provisions for the safety of shipping and aircraft.
- (5) Ports declared by or under law made by Parliament or existing law to be major ports, including their delimitation and the constitution and powers of the port authorities therein.
- (6) Port quarantine, including hospital connected therewith; seamen and marine hospitals.
- (7) Airways aircraft and air navigation provision of aerodromes; regulation and organisation of air traffic and of aerodromes provision for aeronautical education and training and regulation of such education and training provided by States and other agencies.
- (8) Carriage of passengers and goods by railways, sea or air or by national waterways in mechanically propelled vessels.
- (9) Inter-State trade and commerce.
- (10) Regulation and development of inter-State rivers and river valley to the extent to which such regulation and development under the control of the Union is declared by Parliament by law to be expedient in the public interest.
- (11) Terminal taxes on goods or passengers, carried by railway, sea or air; taxes on railway fares and freights.
- (12) Inquiries, surveys and statistics for the purpose of any of the matter in this list.

The matters relating to transport as enumerated in the State List are as under :—

- (1) Communications that is to say, roads, bridges, ferries, and other means of communication not specified in the Union List; municipal tramways; ropeway; inland water-ways and traffic thereon subject to the provisions of Union List and Concurrent List with regard to such waterways; vehicles other than mechanically propelled vehicles.
- (2) Taxes on goods and passengers carried by road or on inland waterways.
- (3) Taxes on vehicles, whether mechanically propelled or not, suitable for the use on roads, including tramcars subject to the provision of entry (4) of Concurrent List.
- (4) Taxes on animals and boats.
- (5) Tolls.

The matters relating to transport as enumerated in the Concurrent List are as follows:—

- (1) Economic and social planning.
- (2) Ports other than those declared by or under law made by Parliament or existing law to be major ports.
- (3) Shipping and navigation on inland waterways as regards mechanically propelled vessels, and the rule of the road on such waterways and the carriage of passengers and goods on inland waterways subject to the provision of Union List with respect to national waterways.
- (4) Mechanically propelled vehicles including the principles on which taxes on such vehicles are to be levied.
- (5) Inquiries and statistics for the purpose of any of the matters specified in State List or Concurrent List.

*Provisional.

Notes:—

1. Production figures are the monthly averages for the quarters.
2. Stocks figures are for the end to the quarters.
3. Ratios are stocks to production.
4. The break-up of this table under the three heads is based on broad comparison of the stock ratio in the third quarter of 1972 with the corresponding quarter of 1970 and on the overall movement in the ratio over the entire period.

PART—II
TRANSPORT SYSTEMS

SECTION 3 : AIR TRANSPORT

AIR TRANSPORT

The Directorate General of Civil Aviation under the Ministry of Tourism and Civil Aviation is responsible for providing the necessary infrastructure for internal air transportation and for the regulation and control of all internal aviation including the gliding and flying clubs. The functions of D.G.C.A. include the following :

- (a) the construction, maintenance and management of terminal buildings, runways, aprons, etc., of civil aerodromes,
- (b) the provision of navigational aids and communication facilities to civil air transport,
- (c) the enforcement of air transport regulations, including safety requirements such as the certification of the air worthiness of aircraft licensing of pilots, navigators and officer aircrew and regulation of air traffic, and
- (d) enquiries into air accidents and incidents affecting the safety of aircraft.

Two Government Corporations, e.g., Air India and Indian Airlines were set up in August 1953, under the Air Corporation Act, 1953. The Air India operates its aircraft on international long distance routes and the Indian Airlines flies on all domestic routes and also routes to neighbouring countries like Afghanistan, Nepal, Burma and Ceylon.

The Corporations thus created under the Air Corporation Act are each entrusted with the functions of providing safe, efficient, adequate and economical and properly coordinated air transport services. They also exercise their powers under the Act to develop air transport services to the best advantage and provide services at reasonable rates.

The general superintendence, direction and management of the affairs and business of each Corporation vest in a Board of Directors consisting of a Chairman and between 5 and 9 members appointed by the Central Government.

SECTION 4 : RAIL TRANSPORT AND ROPEWAYS

RAIL TRANSPORT

The Ministry of Railways is responsible for planning the construction, maintenance and operation of railways and the Railway Board in the Ministry functions as the top executive for administration, technical supervision and direction of railways.

2. The Railway Board consists of the Chairman, Financial Commissioner and three other members, who are *ex-officio* Secretaries to the Government of India in the Ministry of Railways, the Chairman being the Principal Secretary. The portfolios of Civil Engineering, Mechanical Engineering, Transportation and Staff are held by the Chairman and the three Members. By virtue of the inclusion of the Financial Commissioner (Railways) who is *ex-officio* Finance Secretary to the Govt. of India in the Ministry of Railways, the Railway Board exercises all the powers of Government relating to its budget, finance and funds.

3. For the purpose of administration, Indian Railways are divided into nine zones viz., Central, Eastern, Northern, North-Eastern, North-East Frontier, Southern, South-Central, South-Eastern and Western Railways. Each Zonal Railway is headed by a General Manager who is responsible to the Railway Board for operation, maintenance and financial position of the railways in the Zone.

4. The three production units namely, the Chittaranjan Locomotive Works, Chittaranjan, the Integral Coach Factory, Madras and the Diesel Locomotive Works, Varanasi are also under the Ministry of Railways.

5. The Railway Budget was separated from the General Budget in 1924-25 subject to the obligation to contribute a fixed rate of dividend (to be periodically reviewed) to the General Exchequer which provides for the capital invested on the Railway. The Railways are however, free to pursue their own financial policies to their best advantage.

2. The Life Expectancy of the collieries would be an important factor in determining the economic feasibility of a ropeway system.

(b) Ropeways brings 100 tonnes of washery rejects on return side.

SECTION 5 : ROADS AND BRIDGES

SECTION 5 : ROADS AND BRIDGES

ROAD DEVELOPMENT IN INDIA

(a) Jayakar Committee, 1927 :

The end of World War I saw the introduction and development of motor transport in India and with it demands began to be made for better roads, capable of withstanding the century's old bullock cart traffic and the new form of transport, as the existing roads could ill-resist the combined disintegrating action of such traffic. These demands culminated in a resolution passed by both the Chambers of the Indian Legislature in 1927 for the appointment of a Committee to examine and report on the question of road development of India. In pursuance of this resolution a Committee was appointed by the Government of India with Shri M. R. Jayakar as its Chairman.

The Jayakar Committee (1927) came to the conclusion that road development in India, as elsewhere, was passing beyond the capacity of Provincial Governments and local bodies and was becoming a national interest, which might to some extent be a proper charge on Central revenues. Its important recommendation affecting road development was that an additional duty of two annas (12 nP.) per gallon should be levied by the Centre on motor spirit for the specific purpose of road development and that the proceeds should be credited to a separate Road Development Fund. The Committee further recommended that the balance in the fund should not be allowed to lapse at the end of each year, as road programme was required to be planned and executed for a number of years and for this purpose continuance of funds should be assured.

(b) Central Assembly Resolution (1929) for Central Road Fund :

The recommendation of the Committee was accepted by the Government of India and the Central Road Fund came into existence on the 1st March, 1929, upon the authority of a resolution adopted by the Indian Legislature, (See Annexure X). The additional duty of 2 annas (12 nP.) was raised to 2½ annas (16 nP.) per gallon in 1931. The constitution of this fund represents the first important measure taken by the Central Government to promote road development in India.

20% of the annual revenue of the Fund is retained as Central Reserve in the Fund from which grants are given by the Government of India for meeting expenditure on the administration of the Fund, road experiments and research and suitable road and bridge schemes in States e.g. inter-State roads and bridges on the borders of States. The balance of 80 percent is allocated by the Government of India to the various States on the basis of the actual petrol consumption

in the respective States. A third revision was instituted in the fund in April, 1950, called the Special Reserve to which contributions are made from outside the Central Road Fund proper for the financing of specified road projects.

The accounts of the Central Road Fund are maintained by the Accountant General, Commerce, Works and Miscellaneous. Control of expenditure is exercised by the Roads Wing, Ministry of Shipping & Transport, through quarterly reports of expenditure incurred from the Fund, which are received from the Accountant General, Commerce, Works and Miscellaneous and the Accountant General of States in form prescribed for the purpose.

(c) Nagpur Plan for post-war Road Development, 1943 :

The Government of India convened a conference of Provincial and State Chief Engineers at Nagpur in December, 1943 to consider the problem of post-war road development in India. The most important recommendations of this Conference (see also Annexure I) were :—

- (1) Roads should be divided into four classes, namely, National Highways, Provincial or State Highways, District Roads and Village Roads, the National Highways, which were defined as highways running through the length and breadth of India connecting major ports, foreign highways and capitals of Provinces of large States, being the frame work of the country's road system, and
- (2) The Centre should assume financial responsibility for the construction, development, and maintenance of National Highways and they should have an effective say in the use and control of these highways.

After consultation with the Provincial Governments and after discussion at meetings of the Transport Advisory Council, the Government of India accepted with effect from the 1st April, 1947, complete financial liability for the development and maintenance of certain roads provisionally approved by them as suitable for inclusion in a system of National Highways.

(d) National Highways Act, 1956 :

Later in 1956 National Highways Act was passed declaring the National Highways and empowering the Central Government to declare any other highway to be a National Highway or omit any highway from the list of highways declared as National Highways. This Act came into force with effect from the 15th April, 1957. (See Annexure-II).

(e) 20 Year Plan, 1961-81 for Road Development :

The milestone targets set in the Nagpur Plan were achieved by the end of the Second Five Year Plan, but the road system remained deficient in many respects such as surface standard of some roads, weak or missing bridges etc. The political, economic and social changes that took place after the formulation of

the Nagpur plan, necessitated a fresh appraisal of the transport requirements. The Government of India entrusted this task to the Chief Engineers, who prepare new Road Plan for the 20 years period from 1961 to 1981.

The main features of the 20 years Plan (1961-81) were to raise the total road length from about 6,02,943 kms. in 1961 to about 1,057,341 kms. in 1981 with provision for two lane carriage-ways on the National Highways. The Plan aims at doubling the intensity of roads from 16 kms. to 32 kms. per 100 sq. kms. of territory. When the Plan is completed, the average distance from a village in an agricultural area to a metalled road will be reduced from 8 kilometres, envisaged in the Nagpur Plan to 6.4 kilometres. Similarly, that from an unmetalled road will be reduced from 3.2 kms envisaged in the Nagpur Plan to 2.4 kms. The Plan also provides for 1609 kms. of Expressway with limited access and also grade separation at most of the crossings. (See Annexure III.)

The cost of this Scheme was estimated at Rs. 5,200 crores and the Chief Engineers recommended that funds for road construction and maintenance should come not only from the direct beneficiaries i.e., the motor vehicles but also from those to whom indirect benefits accrue from the development of roads.

(U) Report of the Committee on Rural Roads, 1968 :

A one man Committee under the Chairmanship of Shri H. P. Sinha was appointed by the Ministry of Shipping and Transport in 1967. A summary of its findings and recommendations is given in Annexure-IV.

(e) Report of the C.T.P.C., 1966 :

A Committee on Transport Policy and coordination was appointed by the Government of India in 1959. It submitted its Final Report in 1966. Its important conclusions and recommendations relating to roads are given in Annexure IX.

ORGANISATION AND ADMINISTRATION OF ROADS

Unlike the Indian Government Railways whose administrative, financial and technical responsibility and control are centralised in a single authority, the Government roads in India are under the decentralised administrative control of different levels of self-Government, viz., Central Government, State Governments, Zilla Parishads, Block Samitis, Village Panchayats and Municipalities. However, though statutory authority over roads in India is decentralised from national to local level, integration of local and national plan, for development of roads is sought through the devices of delegation of executive responsibility by the higher to the lower tiers of self-Government, and sharing financial and technical responsibility by the higher with the lower levels of self-Government. Road development plans in India may indeed be an exercise in integration of local and national road development plans.

The total road length under various levels of Government of India in 1971-72 was 11.30 lakh kms. of which only 4.72 lakh kms. was surface. The controlled and management of road lengths in India in 1971-72 were distributed as follows among the various tiers of self-Government:—

		(In Lakh kms.)	
		Total	Surfaced
<i>Central Government:</i>			
(1) Roads declared as National Highways	0.28	0.28	0.26
(2) Roads under the Military Engg. Service	0.07	0.07	0.06
(3) Roads under the Railways	0.04	0.04	0.03
<i>State Government:</i>			
(1) P.W.D. Departments	3.49	3.49	2.62
(2) Forest Department	1.15	1.15	0.05
(3) Irrigation	0.64	0.64	0.05
(4) Electricity Deptt.	0.02	0.02	0.02
<i>District Local Bodies</i>	4.67	4.67	1.00
<i>Urban Areas:</i>			
Municipalities, Cantonment Board, Port Trusts and other statutory bodies in urban areas	0.94	0.94	0.63
TOTAL	11.30	11.30	4.72

Considering the road lengths in urban areas as Municipal road length, the road lengths of the first four authorities given above are all Extra-Municipal road lengths. The extension from time to time of the urban area limits has been partly responsible for the variations, for instance, in national highway lengths. Another contributory factor for the relative variations of road lengths under individual authorities has been the transfer of responsibility for road stretches from one authority to another, such as consequent to upgrading or downgrading of a district, State or national highway. In studying the trends in the road length of individual authorities, these limitations need to be kept in view.

The road length given above for national highway includes 1,045 kms. placed under the management of Border Roads Development Board (BRDB). The total road length in India given above is, however, exclusive of the other road lengths maintained by the B.R.D.B.

The CDNES Road lengths shown above do not provide the road lengths of village panchayats separately.

(a) National Highways:

National Highways generally serve to connect the national capital with the state capitals, major port towns, border areas etc. and provide the Central Government an uninterrupted transport complimentary of railways for the purpose of inter State and international transport and trade and national defence and internal security.

The National Highways Act, 1956, empowers the Government of India to declare or omit any highway as National Highway. The 44 National Highways initially included in the schedule to the Act were all extra-municipal under Section 2(1) of the Act. That is, they do not include such parts as were situated in municipal areas—a municipal area being defined as one with a population of 20,000 and more and under the control and management of a municipal committee, town committee, town area committee or any other authority. The Central Government is, however, enabled by the Act to enter into an agreement with the authority in control of the municipal area in relation to the development or maintenance of any such part of a highway situated within the municipal area on the basis of sharing of expenditure thereof.

The Act vests in the Central Government not only the national highway lengths, but also the demarcated lands appurtenant thereto, all structures constructed on, or across the national highways such as bridges, culverts, tunnels, causeways, carriageways etc. and all trees, posts, fences and boundary and miles stones on the national highways on or the land appurtenant to the national highways. Under Section 7(1) of the Act, the Central Government may levy fees for services or benefits rendered in relation to the use of ferries, temporary bridges and tunnels on any national highway.

While control and management of national highways lie with the Central Government, the latter may delegate under Sections of the Act, any of its functions in relation to the development and maintenance of national highway to the Government of the State in which the national highway is situated, or to any authority subordinate to the Central or State Government and call for periodical inspection, reports as well as report on works carried out on the national highway.

The actual works on construction and maintenance of National Highways are executed by the State Public Works Departments concerned, on an agency basis. For this, the State PWDs are paid 7-1/2% as agency charges. The works relating to planning, survey, investigations, specifications and supervision etc. are done by the State PWDs under the guidance of the Roads Wing of the Ministry of Shipping and Transport, and the actual execution of work is generally given to the contractors by calling tenders.

Apart from National Highways, in the country the Government of India in the Ministry of Shipping and Transport is also responsible for the development and maintenance of other roads in the Union Territories while the execution is carried by Union Territories Public Works Departments concerned.

In order to assist the State Governments in the development of road/bridge projects of inter-state or economic importance, the Government of India provides Central Financial assistance for selected projects falling under this category. The pattern of assistance for such projects under the 4th Plan is 100 per cent loan assistance.

(b) Roads Wing (Ministry of Shipping and Transport)

The administration of roads is carried out by the Roads Wing of the Ministry of Shipping and Transport. The Roads Wing is headed by a Director General (Road Development) who is also *ex-officio* Additional Secretary to the Government of India. He is assisted by two Additional Directors General and number of Chief Engineers, Superintending Engineers, Executive Engineers and Assistant Executive Engineers. On the Secretariate side he is assisted by a Deputy Secretary and 6 under Secretaries.

Apart from the combined Secretariat and technical organisation at the Centre, the Roads Wing has a Liaison and Inspectorate Organisation, consisting of Engineer Liaison Officers attached to the Chief Engineers of various States. The Roads Wing has also some Regional Offices, which are located in the States of Bihar, Maharashtra, Rajasthan, Uttar Pradesh, Mysore and West Bengal. These Offices have been set up with a view to exercise on the spot control on the projects concerning the Central Government. The Roads Wing also administers the Central Road Fund and other funds approved by the Centre for the development and maintenance of National Highways and other State Roads. The Roads Wing also acts as a repository of technical information on roads and bridges.

(c) Roads Administration Under Other Central Ministries .

(i) Roads under M.E.S. :

Roads in the military areas are constructed and maintained by the Military Engineering Service Department. These roads are financed by the Ministry of Defence.

(ii) Roads under Railways :

These roads are constructed, maintained and financed by the Ministry of Railways.

(iii) Roads in backward areas :

For the administration of Roads in Backward Areas, 43 Special Multipurpose Tribal Blocks have been set up under the centrally sponsored programme, for intensive development of such areas. This scheme is being jointly financed by the Ministry of Home Affairs and the Ministry of Food, Agriculture, Community Development & Co-operation (Department of Community Development).

(iv) C. D. & N. E. S. Roads :

Besides financing the development of Special Multipurpose Tribal Block the Department of Community Development in the Ministry of Food Agriculture, Community Development and Co-operation is jointly responsible for the development of C D. & N. E. S. Roads, together with the Public Works Departments of the States and public participation by way of Shramdan, Bhoomidan, Sampatidan, etc.

(v) Cantonment Roads :

All Cantonment roads, which serve the civil areas, are constructed and maintained by Cantonment Boards. These Roads are financed by the Ministry of Defence.

(vi) Border Roads :

In order to accelerate the economic development of the North and North-Eastern Border Areas, Border Roads Development Board has been constituted with the Prime Minister as Chairman and the Defence Minister as Deputy Chairman. The other members of the Board include, among others, the Cabinet, Foreign, Defence and Home Secretaries. The Board is responsible for laying down the policy in respect of border communications, prescribing priorities and specifications and the responsibilities of agencies entrusted with the execution of the projects.

The Secretary of the Board is an *ex-officio* Joint Secretary of the Ministry of Shipping and Transport. Apart from the Secretariat of the Board, a technical Organisation has also been created with the Director General of Border Roads as its head.

(d) *Roads Administration under State Governments:*

The States are left with the entire responsibility for the maintenance of :—

- (i) State Highways connecting with the National Highways or with the highways of adjacent States, district head-quarters and important cities of the States.
- (ii) District roads which serve areas of production and markets in the district connecting them with one another or with other highways and railways.
- (iii) Village roads connecting villages and groups of villages with one another and with the nearest district road, highway, railway or river ghat.
- (iv) Roads maintained by the Forest and Irrigation Departments.

State Highways are generally under the charge of the State Public Works Department with a Chief Engineer at the top. In some States e.g., Tamil Nadu and Andhra Pradesh, there is a separate Highways Department which looks after the development and maintenance of highways. The department consists of a number of circles, each responsible for a definite region. Each Circle is generally under the charge of a Superintending Engineer. Each circle is further divided into divisions, each under the charge of a Divisional or Executive Engineer. Each division is further sub-divided into sub-divisions.

Generally, district roads (mainly other district roads) and village roads have, for many years, been the responsibility of local bodies.

The administration of rural roads, i.e., Other District Roads and Village Roads differs from State to State. In the State of Maharashtra, the Zilla, Parishads have been given considerable freedom and under their direction Panchayat Samitis and Panchayats are working. In the case of Tamil Nadu the organisation of Zilla Parishads has yet to be formed. The Panchayat Samitis are working in close co-operation with Government staff. The systems followed in other States fall in between these two extremes.

The roads maintained by Forest and Irrigation Departments are entirely under the control and supervision of the respective departments.

THE CENTRAL ROAD FUND

The Central Road Fund came into existence in 1929 on the recommendation of the Jayakar Committee. To this fund, are credited the proceeds of the additional duty on Customs and Excise on petrol. In the beginning the rate of this additional duty was 2 annas per gallon of petrol. In 1931 this was raised to 2½ annas. The prevailing rate is 16 paise per gallon.

2. The Fund is non-lapsing and has two sub-divisions (1) the Central Road Fund (Ordinary) Reserve and (2) the Central Road Fund (Special) Reserve. Of the proceeds credited to the Fund, 80% are allocated to state government on the basis of petrol consumed within their respective territories. The balance of 20% is credited to the Central Road Fund (Ordinary) Reserve. Contributions made by organisations like Ministry of Defence for road works under their control and supervision are credited to the Central Road Fund (Special) Reserve.

Out of the C.R.F. (Ordinary) Reserve, grants are made for expenditure on research and experimental schemes and also for specific road and bridge construction projects.

THE CENTRAL ROAD RESEARCH INSTITUTE, NEW DELHI

The Central Road Research Institute was set up in 1950. It is an organ of the Council of Scientific and Industrial Research and its functions include :—

1. Developing technology, by applied research, design, construction and maintenance of different types of roads, bridges and runways.
2. Applied research on Traffic and Transportation Engineering
3. Basic scientific research necessary for applied and development research in progress under items 1 and 2 above and in consonance with national priorities.
4. Development of tools, instruments and appliances related to highways technology.
5. Rendering consultancy services to the organisations in the related fields.
6. Organising refresher courses for in-service highways engineers and extending specialised training facilities in the allied subjects.
7. Dissemination of technical information pertaining to highway engineering and allied subjects.

The head of the Institute is a Director. The Institute has nine Research Divisions (each under a Scientist) and is provided with a wide range of specialised research and testing staff and equipment needed for work relating to various branches of Highway Engineering Research such as Soil Engineering, Concrete and Bitumen Technology, Bridge Engineering, Test Tracks Construction, operational Research on Highway Engineering Techniques and Traffic, Engineering and Transportation. Besides research, consultancy services of the Institute render technical advice to the highway engineering organisations in the country for solution of various problems.

For the benefit of highway engineers, the Institute has since 1962 been organising refresher courses periodically for both senior as well as junior highway engineers. So far, 17 refresher courses for senior and 16 courses for junior highway engineers have been organised in which 638 "in-service" highway eng

engineers from State and Central PWDs, Border Roads Organisation, E-in-Cs Branch, Union Ministry of Shipping and Transport, Municipal Corporations etc. received training. The Institute was selected by the United Nations Development Programme as a training Centre for conducting refresher course seminars for highway engineers from ECARF region countries, and as a result five such refresher courses have been held up to far in which 84 highway engineers from Afghanistan, Indonesia, Laos, Nepal, Philippines, Singapore, Thailand, South Vietnam and India, participated. The Institute, at the instance of the Indian Roads Congress and the Planning Commission, also holds every year a training course in Traffic Engineering and Urban Transportation Planning for highway engineers and town planners in India. For the benefit of in-service junior engineers, the Institute very often organises Workshops/Extension Lectures in different States.

The Institute maintains a mailing list having nearly 950 highway engineering research and allied organisations, both Indian and foreign, to whom all the research literature emanating from the Institute is sent on exchange basis.

INDIAN ROADS CONGRESS (I. R. C.)

The Indian Roads Congress was set up in 1934 and was formally registered in 1937 under the Registration Act of 1860. The Organisation of the I. R. C. is similar to the American Association of State Highway officials.

It was constituted to provide a forum for regular pooling of experience and ideas on all matters affecting the construction and maintenance of roads in India, to recommend standard specifications relating to bridges and roads and to provide a platform for the expression of professional opinion on matters relating to roads engineering including such questions as those of organisation and administration.

The membership of the Congress consists of Ordinary Members, Associate Members and Honorary Members. The membership represents Engineers of all ranks for Central and State Governments, Military Engineering Service and commercial interests.

The affairs of the Congress are controlled by a Governing Body known as Council. It consists of 36 members nominated by Government of India, Central P.W.D., Engineer-in-Chief Branch, Central Road Research Institute and State Governments as well as selected from amongst the Ordinary and Associate Members. The Executive Committee, consisting of President, three vice-Presidents, the Treasurer and Secretary, manages the day to day administration, examines and make recommendations to the Government on points arising out in connection with road development which cannot wait for the meeting of the Council. The Director General (Road Development), Government of India is the permanent Treasurer of the office.

The technical activities of the I.R.C. are carried out through its several Committees and Sub-Committees consisting of experts in particular subjects. A list of important publications and papers of the I.R.C. relating to roads may be seen at Appendix II.

(viii) Military Engg. Service	T S	4318 3973	6594 5899	6596 6099

NOTE:—In the earlier issues of this publication cumulative total length of Katcha roads constructed by the CD&NES Blocks have been included with the road lengths of other agencies to arrive at the total length of roads in different dates and in the Indian Union. It is now understood that the roads constructed by the Community Development agencies are transferred to PWD and Local Bodies in the State for maintenance. As such the figures of road length reported in the earlier issues suffered from certain extent of double reckoning. In this issue, efforts have been made to rectify this deficiency. As such the figures of road length of the country as a whole as well as for different States reported in this issue will be less than similar figures incorporated in the earlier issues.

SECTION-6 MOTOR TRANSPORT : ADMINISTRATION

ROAD TRANSPORT : MOTOR VEHICLE ADMINISTRATION

Road Transport is regulated under the provisions of Motor Vehicles Act, 1939. This Central Act (Act 4 of 1939 as amended upto 1969) is an act to consolidate and amend the law relating to Motor Vehicles in India.

This Act lays down laws relating to licensing of drivers of Motor Vehicles, licensing of conductors of Stage Carriage, Registration of Motor Vehicles, Control of Transport Vehicles, Construction Equipment and maintenance of Motor Vehicles, Control of Traffic (including limits of speed, limits of weight, limitation on use, parking places for Public Service Vehicles), Insurance of Motor Vehicles against Third Party Risks and on offences, Penalties and Procedure.

This Act is administered by the State Governments who, with the concurrence of the Central Government, can introduce amendments to the various provisions in the act, keeping in view the local needs and circumstances.

Registration of Vehicles

Generally the Regional Transport Officers in the different States are under the State Transport Commissioners. Transport Directors and Transport Controllers are in-charge of Registration of Motor Vehicles under the Motor Vehicles Act. This work is done by the Superintendent of Police of the districts in Bihar.

Control of Commercial Transport

The operation of commercial motor transport is regulated through a system of permits. Unless covered by a permit granted or countersigned by a Regional Transport Authority (RTA) or a State Transport Authority (STA) or Inter-State Transport Commission, it is an offence to use a commercial transport vehicle on a public place. The route or area of operation, the manner in which the vehicle is to be used (State Carriage, contract carriage, private or public carrier etc.), the carrying capacity, schedules for trips etc. are indicated in the permit.

Licensing Authorities

The R.T.A., S.T.A., or the Inter-State Transport Commission are the competent authorities for the grant of or countersigning of permits. Each State has a State Transport Authority and as many Regional Transport

Authorities as number of regions into which the State is divided for the administration of Motor Vehicle Act. According to Motor Vehicle Act the area specified on the region of R.T.A. shall in no case be less than one entire district or a whole area of a presidency town. The size of the region varies from State to State.

The functions of the S.T.A. cover co-ordination and regulations of the activities and policies of the Regional Transport Authorities; settling dispute and deciding matters on which differences of opinion may arise between R.T.As and performing duties of R.T.A. where no such Authority exists. It is also competent to revise the orders of R. T. As in certain circumstances. The State Transport Authority is bound to carry out directions issued by the State Government in matters of interest in development of motor transport co-ordination of Road-Rail Transport, preventing deterioration of roads etc.

The S.T.As and R.T.A.s are expected to ensure that transport vehicles are plyed so as to serve the interest of the public and not merely that of the permit holders.

Inter-State Transport Commission

The Inter-State Transport Commission was set up under section 63-A of the Motor Vehicles Act, 1939, in March 1959, for developing co-ordinating and regulating the operation of motor vehicles in inter-State regions or area. At present, the Commission consists of a Chairman and three other members (all part-time). The major items of work, on which the Commission is at present engaged, are as follows :—

- (i) to bring about multi-lateral and zonal agreements between the State for movement of public carriers on inter-State routes.
- (ii) to bring about uniformity in the permissible laden weight for transport vehicles on National and State Highways. The Commission has taken up with the State Governments and Union Territories where the laden weight has been placed below 33,000 lbs., due to weak bridges, culverts, roads etc., the questions of carrying out necessary improvements in the condition of roads and bridges so that the limits of laden weight could be fixed at a uniform level of 33,000 lbs. (15 tons approximately).
- (iii) to bring about uniformity in the payments of taxes in respect of temporary permits, which is considered to be one of the bottle-neck to the flow of long distance traffic on inter-State route. The Commission had requested the State Government and Union Administrations to accept payment of taxes in respect of such permits either on weekly or fortnightly basis instead of quarterly basis.
- (iv) to ensure free flow of traffic on the inter-State routes. the Commission is persuading the State Governments/Union Administrations to improve the missing links and remove other bottlenecks on National and State highways.

ROAD TRANSPORT REORGANISATION COMMITTEE, 1958

The Government of India appointed in 1958 the Road Transport Re-organisation Committee, under the Chairmanship of Shri M. R. Masani, to conduct a comprehensive enquiry regarding the existing machinery for the administration of road transport and to make recommendations for the re-organisation of the Transport Administration in the States and other cognate matters.

The main recommendations of Masani Committee related to the upgrading of weight limits for vehicles on roads, the encouragement of truck trailer combination, the grant of all-State validity to public carrier permits at the option of the applicants, liberal issue of permits for intra-state and inter-State operation, the creation of full-fledged Transport Ministries, and appointment of full-time Transport Commissioners in all States, the creation of Development Wings in the Transport Commissioners Office etc

SECTION 7 ; TAXATION ON MOTOR TRANSPORT

TAXATION ON MOTOR TRANSPORT

Motor Transport in India is subject to taxation by the local bodies State Government as well as Central Government. Taxes are levied on the vehicles, passengers and goods carried. They are also levied on the fuel, tyres and tubes and other accessories. The multiplicity of taxing authorities and the multiple-points of taxation were considered to impede the free flow of traffic and development of motor transport in the country. A number of Committees were appointed by the Government to investigate the matter and made recommendations. Summaries of the recommendations of the Study Group on Motor Vehicles taxation and of the Road Transport Taxation Enquiry Committee may be seen in this connection at Annexures V and VI.

SECTION 9 : PUBLIC SECTOR MOTOR TRANSPORT

PUBLIC SECTOR MOTOR TRANSPORT INDUSTRY

Nationalised passenger service exist in all the States and Union Territories, except Tripura, Pondicherry, Goa, Daman & Diu, Dadra and Nagar Haveli, Laccadive & Minicoy Islands and Meghalaya.

The Road Transport Corporation Act

The Road Transport Corporation Act, 1950 was a fillip to the nationalisation of road transport. This Act provides for the formation of statutory corporations with a financial participation of Central Government, the State Governments and the public. The State Governments have roughly provided about 55% of the capital of these corporations and the Central Government and others.

So far upto 1969-70 Andhra Pradesh, Bihar, Gujarat, Kerala, Madhya Pradesh, Maharashtra, Mysore, Punjab (erstwhile PEPSU), Rajasthan, West Bengal and Himachal Pradesh (Mandi-Kulu) have such corporations.

The coverage of nationalisation has so far been fairly wide in Maharashtra, Gujarat, Delhi, Chandigarh, Himachal Pradesh, Manipur and Andaman and Nicobar Islands.

The overall coverage of nationalisation of passenger buses is of the order of 39 per cent considering the number of vehicles in this sector.

Road Transport Financing

With the growth of motor transport in the country, the operators in both the public and private sectors have experienced increasing need for organised finance. Further the operators in the private sector being mostly small-scale operators, the question of viable units was examined. In this connection the conclusion and recommendations of the Study Group on Road Transport Financing and the Study Group on Viable Units may be seen at Annexures VII and VIII.

TABLE No. 9(1)

NATIONALISATION OF PASSENGER AND GOODS VEHICLE¹ in India (1958-59 to 1971-72)

\$Capital employed in 1971-72 represents gross fixed assets excluding capital works in progress minus cumulative depreciation plus or minus working capital i.e. the difference between current assets and advances including investments and current liabilities and provisions. In earlier years however it represented capital investment by sources minus depreciation each year only.

\$Net profits-Gross Revenue-Total cost.

*Expenditure on personnel includes payments made to all classes of employees in the form of wages, salaries, dearness allowances, provident fund contribution, special allowances and for welfare and superannuation benefits.

@Current expenditure includes rents, rates, taxes, insurance-cost of departmental vehicles, general contingencies, miscellaneous expenditure and interest on capital.

SECTION 10 : INLAND WATER TRANSPORT

INLAND WATER TRANSPORT

Inland Waterways are taken to include rivers, canals and lakes as well as harbour waters and creeks. The development of more rapid transport facilities in India reduced the popularity of this mode of transport for long distance traffic. In a number of regions in the country uncatered by rail-road, the I. W. T. Undertakings are the only means of transportation. Some undertakings carry lighterage work in Calcutta and Bombay harbours. They will assume a greater role in linking the world ports with the interior regions of the country as LASHER ships carry more and more of world trade in future.

The Inland Waterways, excluding the harbour waters and creeks, are at present under the regulation and control of State Governments, none of them declared as a national waterway for development by Central Government. However, besides the undertakings operating in creeks and harbour, which are registered with the Merchant Marine Department of the Central Government, the largest single IWT undertaking, namely the Central Inland Water Transport Corporation is a public sector undertaking under the Central Government.

The organised sector is relatively small in IWT, and undertakings in that sector alone may be said to ply modern vessels—dumb as well as self-driven. The private undertakings in this sector are generally captive undertakings of construction undertakings. Even the IWT organisation in the public sector, viz. CIWTC, is not solely meant for running IWT services, it manages a dock-yard and constructs bus-bodies also.

A Committee under the Chairmanship of Justice Bhagwati was appointed by the Government of India with a view to develop the inland water transport system in the country. It has submitted its report and made number of recommendations for the future development of inland water transport in the country.

THE I.W.T. DIRECTORATE

The I.W.T. Directorate was set up in March, 1965 by the Government of India in the Ministry of Shipping and Transport. This Directorate is charged with the following functions:

- (a) to study the immediate long-term transport requirements of the country with a view to co-ordinate inland water transport with other modes;
- (b) to study the existing waterways and formulate schemes for improvements;
- (c) to prepare technical reports on design of waterway and connected structures;
- (d) to formulate proposals for extension of navigability of inland waterways for immediate and short term implementation having regard to availability of water under Irrigation and Power multipurpose project (in consultation with the Central Water and Power Commission) — including any special project to be undertaken purely for navigation;
- (e) to investigate and prepare project reports, design and estimates after carrying out necessary structural and hydraulic model tests for the above in consultation and coordination with the State Chief Engineers concerned and the Central Water and Power Commission;
- (f) to study modern development in all aspects such as improved design of craft, navigational aids, terminal facilities and conservancy, necessary research would also be carried out;
- (g) to draw up standards for classification of waterways, size of locks and clearance under bridges etc.;
- (h) to set up suitable training establishments for training of :
 - (1) diesel machines
 - (2) deck and engine room personnel; and
 - (3) conservancy and technical staff to render technical advice to the Central and State Governments on inland water transport matters.

The Directorate is also responsible for ensuring proper coordination with the Central Water and Power Commission and the Army and Naval Headquarters.

SECTION 11. PORTS

SEA—TRANSPORT

PORTS & LIGHT HOUSES

(a) PORT ORGANISATION IN INDIA

Ports as marine stations are meant to provide sea-borne vessels certain basic services such as dock, harbour or berth facilities for the ships, and landing facilities for the passengers and cargo, apart from cranes, warehouses, labour etc. for cargo handling and transport.

2. In India, the ports may be broadly divided into those under the control of the Central Government and those under the control of maritime State Governments. The ports under the control of Central Government are eight in number and are known as the "Major Ports". (Two intermediate ports namely, Mangalore and Tuticorin are also coming up shortly as major ports). The ports under the State Governments/Union Territories are 187 of which 25 are 'Intermediate Ports' and 162 'Minor Ports'.

3. The major ports under the Central Government, are governed by their respective Central Acts. The three older ports of Bombay, Calcutta and Madras are governed by the Bombay Port Trust Act, 1879, Calcutta Port Act 1890, and Madras Port Trust Act, 1905, respectively. The remaining five, viz. Cochin, Visakhapatnam, Mormugao, Kandla and Paradip are governed by the Major Port Trust Act, 1963.

4. The intermediate and minor ports are administered by the maritime State Governments with the help of local advisory bodies and their mode of administration varies. The intermediate ports of Mangalore in Karnataka State and Tuticorin in Tamil Nadu, which are being developed as major ports are administered by the Port Trust Boards. The various other ports under the maritime State Governments are administered by their State Port Officers.

5. As for the major ports, their administration is carried on by the Port Trusts created under the Acts governing them. The pattern of constitution of Major Port Trust is similar. The Chairman of each Major Port Trust is

appointed by Central Government and the Board of Trustees/Commissioners nominated for two years by the Central Government to represent the business, labour, railway and other interests concerned with the Port. Each Major Port Trust is empowered to appoint its own staff cadres to carry out its various activities. Questions relating to administration are decided by a majority of Trustees/Commissioners present. The Major Port Trusts are empowered to receive grants from Government, raise loan in the open market, and fix and charge rates and fees for the services rendered. The Acts governing these Ports do not lay criteria or objectives in regard to the rates charged, cost incurred for the returns to be secured on the capital invested. They are, however, required to receive the prior approval of Central Government for their annual budgets and also submit annual administration reports. Their annual accounts are also subject to audit by the Comptroller and Auditor General of India.

6. The port authorities in India derive their revenue mainly from levy of dues and charges on the ships visiting their ports and the cargo handled in their port-areas. The rates of dues, fees and charges of the ports are not uniform, the costs incurred by the ports being different from one another. The main sources of revenue from ship traffic are: (i) Port dues, (ii) Pilotage, (iii) Berth hire, (iv) Survey and measuring fees and (v) Ship-repairs in dry docks. The main sources of revenue from cargo traffic are :

(i) Wharfage/harbour dues/landing fees, (ii) Crane-hire charges, (iii) Rentals from ware-houses, and (iv) Demurrage charges. Besides, the port authority may also earn an income by providing rail and other transport for the cargo movements in the port-precincts, as well as bunker fuel and water facilities for the visiting ships.

7. Besides administration, accounting and auditing, the main activities of port authorities include (1) hydrographic surveys, dredging, conservancy and maintenance of port approaches, navigable channels and along side berths, (2) light house and light vessels under the port and buoying and lighting of channels, (3) pilotage and towage, mooring and unmooring, berthing and unberthing of visiting ships, (4) handling, ware-housing and transportation of goods in the port area, (5) civil, mechanical and electrical engineering and maintenance of harbour crafts and plants, (6) fire fighting and fumigation, (7) stores (8) watch and ward and management of port properties and

estates, (9) medical, welfare, housing, etc. To carry out these heterogeneous activities, each port authority engages different categories and types of labour. The workers employed by the port authorities are generally known as 'port workers' and they constitute the single largest contingent of labour in each port.

8. Apart from the port authority and its offices, a number of other agencies/ organisations, both private and government, operate in the port area. They include the Dock Labour Board, Stevedore organisation, handling employees licensed measures, clearing and forwarding agents, chipping and painting employers, owners of barges, lighters and launches, ship owners, shipping agents, tea traders, custom and other government agencies. Generally, the workers employed by agencies other than the Port Trust are known as "Dock Labour" who are required to register with the Dock Labour Board located in the port area.

9. The most prominent activity in a port is cargo-handling which absorb most of the labour in the port area. There are essentially two sets of workers engaged in handling the cargo of ships. One set is engaged by the Stevedore to work on board and the ships, while the other set belonging to the port authority handle the cargo from the landing point to the stocking point or vice-versa.

10. The wages paid to workers vary from category to category of workers and also from one employing agency to another. The two predominant methods for wage payment are : fixed monthly salary and piece wage rate or hourly wages. Practically all the major ports have evolved schemes for incentive wage rates for different types of work and activities.

11. Rail-transport facilities are provided for cargo movements in the port area of all major ports except Paradip which is connected only by roads. The railway system is owned and operated by the port authorities in the case of Calcutta, Bombay, Madras, Visakhapatnam and Mormugao Ports. In the case of Cochin Port, it is owned by the Port Trust and operated by the Southern Railway. At Kandla Port, the port railway is both owned and operated by the Western Railway authorities.

12. The ships visiting Indian ports are required to pay not only the dues fees and charges for the services rendered by the port authority concerned, but also light-dues to the Light-Houses Department of the Central Ministry

of Shipping and Transport. The navigational aids are of 2 categories namely 'general' and 'local'. The provision, superintendence and management of 'general' aid is vested in the Union Government and the 'local' aids are the responsibility of State Governments, Port Trusts etc. but general control over all navigational aids is exercised by the Union Government. This is being done through the Department of Light houses and Light Ships which is a self supporting Department, its revenue being derived from light dues levied on shipping at the current rate of 30 paise per ton for Steamship and 6 paise per ton for sailing vessels.

Committees appointed on ports : There have been occasional appointment of Committees which related either to specific ports or to selected issues. Examples of the former category are the reports of Sir Godfrey Armstrong's West Coast Port Development Committee, Desai Committee on service conditions of marine services at the ports initially for Bombay and then for the remaining ports. The Port and Shipping Statistics Committee (1955) and also the report (July, 1959) of the International Association of Ports and Harbours (I.A.P.H.) Team fall under the later category. There have also been a few inquiries, wage structure, categorisation of labour, etc. at the ports undertaken. Committees as P. C. Chaudhuri Committee (1957) and the Central Board for Port and Dock Workers (1969).

In 1968, the Government of India appointed the Commission on Major Ports with the following terms of reference :—

- (i) to examine the method of working of Major Ports with a view to improve their operational efficiency;
- (ii) to consider broadly their development programmes in the context of present and future national needs with special reference to the changing shipping and port technology;
- (iii) to examine specifically the following aspects of port working;
 - (a) Management, (b) Financing and (c) Personnel.
- (iv) to consider in the light of the above, the capacity of the ports to enhance the current rate of ex-gratia payment; and
- (v) to review the arrangements that exist for co-ordination among the different ports; and

(ii) to make recommendations on the above and other ancillary matters.

The Commission submitted its Report in June, 1970.

DEVELOPMENT OF PORTS IN THE FOURTH PLAN

The total cost of the programme for the development of major ports is about Rs. 280 crores. The Port Trusts are expected to contribute about Rs. 100 crores from their own resources. The more important schemes in progress which are proposed to be completed in the Fourth Plan are the Haldia Dock system and the Mangalore and Tuticorin Port projects. The first phase of development of Tuticorin and Mangalore Ports is expected to be completed by 1972-73. Provision has been made for completion of the dock expansion which were started in the Third Plan. Among the new major schemes, mention may be made of the installation of modern ore handling facilities at Mormugao and Madras harbours, construction of an outer harbour at Vishakhapatnam for handling deep draft ore carriers initially upto 100,000 dwt (dead weight tonnage) and ultimately upto 200,000 dwt., construction of a satellite port for Bombay at Nhava Shiva and an oil terminal at Cochin. It is proposed to set up a Central Dredging Organisation to meet the capital dredging requirements of major and minor ports. Provision is being made for technical investigations relating to problems common to various ports as also for the setting up of a consultancy organisation.

For the development of minor ports a provision of Rs. 35 crores (Rs. 20 crores in the Central Plan) has been made in the Fourth Plan. Provision has been made for a Minor Ports Dredging and Survey Organisation, development of ports facilities in Andaman and Nicobar Islands, Laccadive, Minicoy and Amini Islands and a few other selected ports in State such as Porbander, Mirya Bay, Cuddalore etc.

(b) DEPARTMENT OF LIGHT HOUSES AND LIGHT SHIPS

The Department of Lighthouses under the Ministry of Shipping and Transport looks after the maintenance and development of navigational aids on the coastline, excepting those maintained by the port and the maritime State Government. The lighthouse Department is a self-financing Department. The light dues charged are 6 paise per NRT for sailing vessels and 50 paise per NRT for steaming vessels that enter the ports of India.

SECTION 12 : SHIPYARDS

SHIPYARDS AND SHIP REPAIRS

India has got an age old tradition in building sailing vessels whose development is looked after by the Directorate General of Shipping. Modern ship-building of our ocean going vessels commenced in 1946 with the establishment of the Hindustan Shipyard at Visakhapatnam. There are five shipbuilding undertakings, all in the public sector. The Mazgaon Dock Ltd., together with its subsidiary, the Goa Shipyard Ltd., and the Garden Reach Workshop Ltd. are under the management of the Ministry of Defence. The Hindustan shipyard and the Cochin Shipyard which is under construction are looked after by the Ministry of Shipping and Transport.

The Ship Repairs industry in India is an age old activity, the earliest undertaking being M/s. Mazgaon Dock Ltd., which was established in 1774. There are about 18 ship-repair undertakings which undertake repairs to ocean going ships. Of these, 7 are on the West-coast and 11 on the East-Coast. The eighteen ship-repair yards include the public sector units viz; M/s. Mazgaon Dock Ltd., M/s. Garden Reach Workshops Ltd. and M/s. Hindustan Shipyard Ltd., which undertake construction of ships for various purposes. In addition, some of the major ports have also dry dock facilities for undertaking repairs to ships.

SECTION 14 : OVERSEAS SHIPPING INDUSTRY

SHIPPING INDUSTRY

Both Coastal and Overseas Shipping are subject to State regulation and assistance. The important Government agencies regulating and assisting the shipping industry are briefly described below :

(1) Directorate General of Shipping

The Directorate General of Shipping in the Ministry of Shipping and Transport entrusted with the administration of the Indian Merchant Shipping Act, 1958, executes the Government policies on shipping. The important functions of the Directorate include the following :

- (a) Observance of International Conventions relating to maritime matters and measures to ensure the safety of life and ships at sea ;
- (b) Administration of Indian Merchant Shipping laws, and all matters affecting merchant shipping and navigation, such as issue of a general licence, a specified period licence, or a specified voyage licence for the operation of a ship in overseas trade ;
- (c) Development of Indian Shipping Industry and sailing vessels industry and regulation of freight rates in overseas trades ;
- (d) Provision of Merchant Navy training facilities or the officers and ratings regulation of employment of seamen and welfare of seamen ;

The important institutions and offices which work under the direct administrative control of this Directorate are :

(a) Training Establishments for Merchant Navy personnel :

1. T. S. Dufferin, Bombay.
2. Training Establishments for ratings at Calcutta, Visakhapatnam and Navalakhi.
3. Lal Bahadur Shastri Nautical and Engineering College, Bombay.
4. Directorate of Marine Engineering Training, Calcutta and Bombay.

(b) Employment and Welfare of seamen :

1. Seamen's Employment Offices, Bombay and Calcutta.
2. Seamen's Welfare Offices at Bombay, Calcutta and Madras.

3. Offices of the Principal Officer, Mercantile Marine Department, Bombay, Calcutta and Madras
4. Shipping Offices at Bombay and Calcutta.
5. Regional Offices (Sails) at Bombay, Tuticorin, Calicut and Jamnagar.
6. Freight Investigation Bureau with Offices at Madras and Calcutta

(2) Shipping Development Fund Committee

In March, 1958, under the Merchant Shipping Act, 1958, a statutory non-lapsable fund called the Shipping Development Fund was established by the Central Government to facilitate the growth of Indian tonnage through grants of loans and financial assistance to Indian Shipping Companies for acquisition and maintenance of ships.

The receipts, of Fund, as provided, consists of :

- (a) Grants and loans received from the Central Government.
- (b) Repayment of Indian Companies of the loans taken from the Fund.
- (c) Interest on loans or dividends from investments made from the Fund
- (d) Such other sums as may be received for being credited to the Fund.

The Fund is operated by a Committee known as Shipping Development Fund Committee (SDFC) constituted by the Central Government. The Secretary of the Ministry of Shipping and Transport is the ex-officio Chairman of the Committee, other members being the representatives of the Ministry of Finance and Ministry of Law, Government Director on the Board of Indian Shipping Companies, Director General of Shipping etc

The type of assistance provided by the Committee to various shipping companies is as under :

1. Loans for acquisition of ships.
2. Guarantee in respect of ships acquired under extended terms of payment.
3. (i) Guarantee to pay instalments of deferred portion of price to the sellers/shipyard on behalf of the Indian Shipping Company.
- (ii) Counter-guarantee to pay instalments of deferred portion of price to scheduled Commercial Bank where guarantee to sellers shipyard has been given by such a Bank on behalf of the Indian Shipping Company. Guarantees are issued only when loans are sanctioned.

The quantum of SDFC loan is restricted to 75% of the purchase price in the case of second hand ships, 90% in the case of new ships ordered from abroad and 95% for new ships ordered from Indian yards.

The rate of interest charged on loans granted by SDFC is 8% per annum payable half yearly. If borrower pays the amounts due by the prescribed dates and fulfils all the obligations under the loan agreement and other documents executed in respect of loan, a lower rate of interest is charged.

The period of repayment of SDFC loan for acquisition of second hand ships shall not exceed a prescribed proportion of the residual of the income-tax life of a ship (the life of the ship taken at 20 years). The maximum period of amortisation of loan is prescribed and is generally higher for ships ordered from Indian yards than for ships ordered from foreign yards.

The other important terms and conditions for availing the SDFC assistance are :

- (i) Total cover required to be furnished is 133 1/3 % of the outstanding amount of loan or of the guarantee, if any, issued in respect of the loan, whichever, is higher. The ship in respect of which loan, is sanctioned is to be given in first mortgage to the Committee. The short-fall in security is to be made good by furnishing other acceptable security to the SDFC. Ships offered as security are required to be maintained in highest classification and kept insured both for marine and war risks for an amount to be specified by the SDFC for any higher amount;
- (ii) For Companies with an equity capital of Rs. 10 million or more, the Debt Equity ratio should be 6 : 1 while for companies with an equity capital of less than Rs. 10 million, it should be 4:1; and
- (iii) Companies availing SDFC loans are required to deal exclusively in shipping business and accept nominees of the SDFC on their board of Directors.

(3) Shipping Coordination Committee

The Shipping Coordination Committee (SCC) in the Ministry of Shipping and Transport serves as a liaison between the shipping interests and industry on the one hand, and the Central, State and other government agencies needing shipping space on the other. The important functions of this Committee are :

- (i) To act as a Clearing House of information on all cargo shipped on Government account with a view to making the most effective use of the available Indian tonnage ;
- (ii) to advise on the best and the most economical shipping arrangement possible for the movement of Government owned cargoes when Indian Shipping is not available i.e., whether non-Indian vessels should be chartered and if so, whether on time basis or voyage basis etc; and

(iii) to coordinate and advise on all policy matters relating to shipping including the development of Indian Shipping

The Chairman and Secretary of the SCC are the Secretary and the Controller of Chartering in the Ministry of Shipping and Transport respectively. Its members are the representatives from the concerned Ministries and Government Organisations, Indian National Shipowners' Association, Shipping Companies etc.

The Shipping Co-ordination Committee has a Chartering Wing and a Co-ordination Wing. The Shipping Co-ordination Wing of the Shipping Co-ordination Committee of the Ministry looks after the shipping arrangements for Government cargoes moving in parcels by Conference or non-Conference liner ships including Indian ships. The shipping arrangements for bulk cargoes carried mostly in full ship loads are made by the Chartering Wing of Shipping Co-ordination Committee. The Chartering Wing allots cargoes to Indian ships whenever they are available in position and also arranges shipment by non-Indian vessels when Indian vessels are not available in the required position. Export for the imports under the Food for Peace programme, which are effected in American Ships chartered through the Indian Supply Mission, Washington, the entire shipping and chartering work relating to all cargoes (including food grains) belonging to the Central Government, State Government, Public Sector Projects and Undertakings in the country is carried out by the Shipping Co-ordination Committee, giving preference to the Indian Shipping Companies.

The Indian Shipping Companies through their liaison officers in Delhi keep contact with the Chief Controller of Chartering in the Ministry of Shipping and Transport regarding availability of cargoes. To minimise the time factor, the Chief Controller of Chartering and his officers might themselves communicate directly with the shipping companies which are likely to be interested in the carriage of cargoes. If any of the Indian shipping companies is in a position to carry these cargoes, the freight rates and terms are negotiated and fixed, except in the case of Conference cargoes, which are carried at the Conference rates and on Conference terms. In respect of open cargoes for which no tariff rates are laid down, special rates are negotiated by the Chief Controller of Chartering with the Conferences.

SECTION 13 : COASTAL SHIPPING INDUSTRY

COASTAL SHIPPING INDUSTRY

With a coast line of over 4,800 kilometers on the western and eastern banks of the mainland and with the islands of Andaman and Nicobar in the Bay of Bengal and the Laccadive, Minicoy and Aminidives in the Arabian Sea which also form part of Indian territory, the coastal trade of India consists of trade between the various ports, on the mainland, as well as trade between the mainland and these islands. Inter-island services are negligible since the islands are not yet well developed. Some ferry services exist, however for passengers and essential commodities. Regular Feeder Services are also non-existent except occasionally when a large bulk carrier brings grains from abroad and smaller ships are used to lighten it and carry cargo to smaller ports.

Reservation of Coastal Traffic

Coastal traffic is reserved for national shipping. Under Section 407 of the Merchant Shipping Act, 1958, no ship other than an Indian ship shall be engaged in coastal trade except under a licence granted by the Director General of Shipping. Though foreign ships could thus operate under a licence, such licences are not normally granted except in special cases such as where a foreign ship carrying cargo for one Indian port happens to unload it at another Indian port and subsequently the same or another foreign ship wishes to carry that cargo to the original port of destination; similarly due to shortage of Indian tankers tonnage for the movement of refinery products on the coast, foreign tankers are permitted to operate.

Shipowners Association for Coastal Shipping

The Indian Coastal Conference is an association of coastal operators which was formed by an agreement signed on 31-8-1951. Its present membership consists of 16 companies. An essential condition for its

membership is that the company should own 2. not less than 750 GRT each, or one ship not below 1500 GRT licensed, to ply on the coast. A number of its members are engaged in overseas trade also.

The Conference regulates the dry cargo trade on the coast, prescribes terms, conditions and shipping practices for its carriage. The arrangement does not, however, provide for the pooling of cargo or freight or scheduled sailings by member lines in any sector of the coast. Nor does it provide for quotas for the member lines in the movement of any commodity. There is also no obligation on the member lines to retain any minimum tonnage on the coast with the result that they are free to direct their coastal vessels (with the permission of Director General of Shipping) to overseas trade when they find it substantially more profitable than the coastal trade. The Conference is recognised by the Government of India as the representative body of coastal shipowners. The conference is also permitted to regulate the coastal freight rate to a limited extent.

Shippers' Associations for Coastal Trade.

The shippers have three zonal associations to look after their interests, namely :

- (1) The Western India Shippers Association, covering the West Coast of India from Kandla to Bombay.
- (2) The Eastern India Shippers Association, catering to the needs of the shippers in Calcutta; and
- (3) The Southern India Shippers Association which looks into the grievances of shippers in the area covered by the region from Madras to Kerala.

An apex body viz., All India Shippers Council looks after the problems of shippers as well as overseas trade at a national level.

Fixation of Coastal Freight Rates & Fare

Under section 412 of the Merchant Shipping Act, the Central Government have powers to fix coastal freight rates and passenger fares, and if considered necessary, may constitute a Board for this purpose. Though no standing Board has so far been constituted, a

hoc committees, commissions were set up several times for this purpose. In actual practice, the Indian Coastal Conference is allowed to vary freight rates on individual commodities, excepting coal, salt and timber; but a general increase in freight rates or increases in the rates for coal, salt and timber can be effected by the Coastal Conference only with the prior approval of Government. Similarly as regards chartering whenever, there is disagreement between shipowners and charterers, the long term charter hire rate for the Indian tankers taken for employment on the coast is fixed by Government. The tanker rates and passenger fares are not within the purview of the Indian Coastal Conference.

The Government of India allowed the following general increase in freight rates since 1956:—

April, 1956	15%
1st June, 1962	15% Except for Coal moving up to Cochin for which the increase allowed was 10%
1st August, 1965	10%
1st July, 1967	10%
1st April, 1970	20% (Except for Coal)
15th June 1971	10% on Coal alone.
15th Dec. 1972	15% Except for coal on which only 5% was allowed.

In addition to above, the shipping companies were allowed to levy surcharge on the cargo from time to time so as to cover the increase in fuel prices.

To facilitate periodic review of coastal freight rates by Government, provisions are prescribed for furnishing the financial results of coastal operation of each shipping company to the Director General of Shipping who will examine these results to see whether any increase in freight rates is called for and then make suitable recommendations to the Central Government who will take a decision after taking into consideration the interests of both the shipowners and the shipper.

Customs Procedure for Coastal Cargo

For loading coastal cargo on a ship, the shipper is required to fill in shipping Bill known as "Shipping Bill for Indian Produce (Free Goods)". This bill is cleared by Customs normally without physical examination of the packages prior to shipment. The procedure prescribed

for the Customs for the clearance of coastal vessels is more or less the same as for vessels sailing for overseas ports.

For unloading, the consignees are required to file with the Customs prior to the arrival of ship a Bill of Entry, giving the full details of cargo such as number of packages, marks, description, gross weight value, port(s) of loading, country of origin etc. On the arrival of ship the Agents file Import General Manifest. The packages indicated in the Bill of Entry of a consignee are verified with the Import General Manifest and necessary notes made in the records of both the Customs and the port authorities. The goods are then discharged in the custody of Port authorities (who deliver them to the consignee on issue of delivery order by the Ship's Agents) who will subsequently issue to the Customs and the Ship's Agents their out-turn. Reports showing the actual quantity landed and the shortage or excess, if any, as per the Import General Manifest of the Agents of the ships. The Customs authorities ask the Agents to give explanations for the unaccounted packages. If the shortage includes dutiable cargo imported from abroad but transhipped from one Indian port to another by a coastal vessel the Customs authorities impose a penalty on the carriers. Similarly, there are certain items of exportable goods on which less is leviable by the Customs, and if any of these goods are also short-landed by a coastal vessel, the Customs levy a penalty on the carriers. In all other cases of goods short landed by a coastal vessel no penalty is imposed by the Customs.

- (a) The date in the year to which the figures apply is shown in brackets under the name of the country concerned.
- (b) Including tractors used for haulage of goods vehicles on public roads.
- (c) Including tractors.
- (d) Exclude vehicles of unstated capacity.
- (e) Excluding vehicles whose licence was not issued.
- (f) Including special vehicles, such as fire engines and ambulance.
- (g) In addition, there were 2652 tractors of semi-trailers, operated for hire or reward.
- (h) Including 102119 vehicles used for both goods and passengers (station wagons).
- (i) Excluding vehicles exempt from licensing duty.
- (j) In order to estimate the distribution of vehicles by load capacity, vehicles census figures by unladen weight were related to a sample of gross weight and payload, given by vehicle manufacturers.

(a) Because of differences in the methods of compilation of the basic statistics of the various modes of inland transport and of the fact that the original statistics of road transport are in many cases, particularly when transport on own account is involved, based on estimate made in the country concerned, the figures in this table must be regarded merely as orders of magnitude. Moreover in respect of some countries, the share of road transport in total tonnage carried may be slightly over stated because of double entry where the same consignments are carried successively by different operators. Finally, ton. km. have been given the same value for all modes of transport.

In certain countries, coastal shipping plays an important part in the inland transport of the country. Such countries include Denmark, Italy, Norway and the United Kingdom.

(b) Main-line system of each country only.

(c) Transport by National Shipping Undertakings at home and abroad.

(d) Great Britain.

* Estimate by the Secretariat.

ANNEXURES I—X

ANNEXURE 1

FORMULA INDICATING ROAD MILEAGES IN EACH PROVINCE AND STATE TO GIVE A TOTAL OF 400,000 MILES BEING THE ESTIMATED REQUIREMENT FOR THE WHOLE OF INDIA FOR THE NEXT TWENTY YEARS

It is desirable that the road requirements of all Provinces and States should be calculated as far as possible on the same basis, making due allowance for geographical, agricultural and population conditions.

2. The object of road planning as considered by the Nappur Conference of State Chief Engineers held in 1943 under the Chairmanship of Shri J. Vesugar is to give India a well balanced road system suitable for the needs of the country for the next 20 years and so that practically all villages are brought reasonably close to a planned system of all-weather roads. As the net work of railways and roads will obviously be closer near large towns and in densely populated agricultural areas than in undeveloped and sparsely populated regions, any formula evolved to indicate communication requirements should take these needs into account. Possible agricultural or industrial development during the next twenty years should also be taken into account.

3. The formula for the communication system required in each area should therefore contain several factors, giving the requirements (A) for agricultural areas, (B) for non-agricultural areas, (C) for large villages, towns and markets, and (D) for proposed agricultural and industrial development for the next twenty years. To obtain the requirement for roads, the length of railway communication, (E) already in the area should be deducted. (It is assumed there will be no great extension of the railway system after the war). With regard to Air transport, it was decided that just as the introduction of the motor car and motor lorry had not made obsolete the bullock cart which had increased in numbers and was still increasing and as the making of railways had stimulated rather than decreased the making of roads, so air transport would not take the place of road and rail transport during the next twenty years but would cater for its own traffic just as cart, railway and motor vehicle transport cater for their own traffic. The formula should therefore be in the form:—

$$\text{Road mileage requirements} = A + B + C + D - E$$

4. The formula is set out below in more detail.

THE NATIONAL AND PROVINCIAL HIGHWAYS AND MAJOR DISTRICT ROADS

$$\left. \begin{array}{l} \text{Mileage of National and} \\ \text{Provincial Highways and} \\ \text{Major District Roads.} \end{array} \right\} = \frac{A}{5} + \frac{B}{20} + N + 5T + D - R$$

Where A = Agricultural area of the Province or State concerned.

B = Non-agricultural area.

N = Number of towns and villages having a population of 2,001—5,000.

T = Number of towns and villages having a population over 5,000.

D = An allowance for agricultural and industrial development during the next 20 years.

R = Railway mileage in the area under consideration.

NOTE—1. Provinces and States should add allowance for future development; about 1/5 percent has been allowed in all for possible future agricultural and industrial development during the next 20 years but as such development will be more in some areas and less in others, the basis on which the figures added in this column have been calculated, should be stated.

2. The ratio 0.2 A in the formula represents a grid or net work of roads in the Agricultural area with 10 milesides and 0.05 B represents a grid with 40 mile sides. This means that in the highly developed agricultural area no village will be more than 5 miles from a main road and the average distance will be less than two miles in most cases. Similarly in the non-agricultural area no village will be more than 20 miles from a main road and the average distance will be 6 or 7 miles.

3. In addition to this net work towns and villages with a population over 2,000 have been allowed additional roads in various ratios: this appears reasonable as the network of roads gets closer towards large population and market centres.

$$\left. \begin{array}{l} \text{Mileage of other} \\ \text{District and Village} \\ \text{Roads.} \end{array} \right\} = \frac{V}{3} + \frac{Q}{2} + R + 2S + D$$

V = Number of villages with population of 300 or less

Q = Number of villages with population of 501—1,000

R = Number of villages with population of 1,001—2,000

S = Number of villages with population of 2,001—5,000

D = An allowance for agricultural and industrial development during the next 20 years.

Note — 1. Small villages with a population of 500 or less were allowed an average of only one-fifth of a mile each because in Provinces where the density of villages is high, a greater number would be picked up by main and subsidiary roads. Larger factors have been taken for the bigger villages

2 Provinces and States were requested to add allowance for future development and to show the basis on which the figures have been calculated.

3. The total mileage allowed for provinces is 210,000 that, for States being 40,000.

4. For the existing mileage of earth roads some provinces included in their official reports the mileages maintained by the P.W.D. and Local Bodies, while the others included estimated mileages of all village roads and trails whether maintained or not. The figures on earth roads are therefore not comparable as between Provinces

ANNEXURE II

THE NATIONAL HIGHWAYS ACT, 1956

An Act to provide for the declaration of certain highways to be national highways and for matters connected therewith.

Be it enacted by Parliament in the Seventh year of the Republic of India as follows:—

1. Short title, extent and commencement.—(1) This Act may be called the National Highways Act, 1956.

(2) It extends to the whole of India.

(3) It shall come into force on such date as the Central Government may by notification in the Official Gazette, appoint.

2. Declaration of certain highways to be national highways.—(1) Each of the highways specified in the Schedule except such parts thereof as are situated within any municipal area is hereby declared to be national highway.

(2) The Central Government may, by notification in the Official Gazette, declare any other highway to be a national highway and on the publication of such notification such highway shall be deemed to be specified in the Schedule.

(3) The Central Government may, by like notification, omit any highway from the Schedule and on the publication of such notification, the highway so omitted shall cease to be a national highway.

3. Definition.—In this Act, “municipal area” means any municipal area with a population of twenty thousand or more, the control or management of which is entrusted to a municipal committee, a town area committee, a town committee or any other authority.

4. National highways to vest in the Union.—All national highways shall vest in the Union, and for the purposes of this Act “highways” include—

(i) all lands appurtenant thereto, whether demarcated or not;

- (ii) all bridges, culverts, tunnels, causeways, carriageways and other structures constructed on or across such highways; and
- (iii) all fences, trees, posts and boundary, furlong and milestones of such highways or any land appurtenant to such highways.

5. Responsibility for development and maintenance of national highways.—It shall be the responsibility of the Central Government to develop and maintain in proper repair all national highways, but the Central Government may, by notification in the Official Gazette, direct that any function in relation to the development or maintenance of any national highway shall, subject to such conditions, if any, as may be specified in the notification, also be exercisable by the Government of the State within which the national highway is situated or by any officer or authority subordinate to the Central Government or to the State Government.

6. Power to issue directions.—The Central Government may give directions to the Government of any State as to the carrying out in the State of any of the provisions of this Act or of any rule, notification or order made thereunder.

7. Fees for services or benefits rendered on national highways.—(1) The Central Government may, by notification in the Official Gazette levy fees at such rates as may be laid down by rules made in this behalf for services or benefits rendered in relation to the use of ferries, temporary bridges and tunnels, on national highways

(2) Such fees when so levied shall be collected in accordance with rules made under this Act.

(3) Any fee leviable immediately before the commencement of this Act for services or benefits rendered in relation to the use of ferries, temporary bridges and tunnels on any highways specified in the Schedule shall continue to be leviable under this Act unless and until it is altered in exercise of the power conferred by sub-section (1).

8. Agreements with State Governments or municipalities.—Notwithstanding anything contained in this Act, the Central Government may enter into an agreement with the Government or any State or with any authority entrusted with the control or management of any municipal area in relation to the development or maintenance of the whole or any part of a national highway situated within the State or, as the case may be, in relation to the development or maintenance of any such part of a highway situated within a municipal area as referred to in sub-section (1) of section 2 and any such agreement may provide for the sharing of expenditure by the respective parties here to.

9. Power to make rules.—(1) The Central Government may, by notification in the Official Gazette, make rules for carrying out the purposes of this Act.

(2) In particular and without prejudice to the generality of the foregoing power, such rules may provide for all or any of the following matters, namely:—

- (a) the manner in which, and the conditions subject to which any function in relation to the development or maintenance of a national highway or any part thereof may be exercised by the State Government or any official or authority subordinate to the Central Government or the State Government;
- (b) the rates at which fees for services rendered in relation to the use of ferries, temporary bridges and tunnels on any national highway may be levied and the manner in which such fees shall be collected;
- (c) the periodical inspection of national highways and the submission of inspection reports to the Central Government;
- (d) the reports on works carried out on national highways; and
- (e) any other matter for which provision should be made under this Act.

10. **Laying of notifications, rules, etc. before Parliament.**—All notifications or agreements issued or entered into under this Act shall be laid before both Houses of Parliament as soon as may be after they are issued or entered into and all rules made under section 9 shall be laid for not less than thirty days before both Houses of Parliament as soon as may be after they are made, and shall be subject to such modifications as Parliament may make during the session in which they are so laid or the session immediately following.

NATIONAL HIGHWAYS IN INDIA

(as on March 1972)

S. No.	N.H. No.	Description
(1)	(2)	(3)
1	1	The Highway connecting Delhi, Ambala, Jullundur, and Amritsar and proceeding to the border between India and Pakistan.
2	1A	The Highway connecting Jullundur, Madhopur, Jammu, Banihal, Srinagar, Baramulla and Uri.
3	2	The Highway connecting Delhi, Mathura, Agra, Kanpur, Allahabad, Banaras, Mohania, Barhi and Calcutta.
4	3	The Highway connecting Agra, Gwalior, Shivpuri, Indore, Dhulia, Nasik, Thana and Bombay.

(1)

(2)

(3)

- 4 The Highway starting from its junction near Thana with the highway specified in serial No. 4 and connecting Poona, Belgaum, Hubli, Bangalore, Ranipet and Madras.
- 4A The Highway connecting Belgaum, Anmod, Fonda and Panaji.
- 5 The Highway starting from its junction near Baharagora with the highway specified in Serial No. 3 and connecting Cuttack, Bhubaneswar, Visakhapatnam, Vijayawada and Madras.
- 5A The Highway starting from its junction near Haridaspur with N. H. No. 5 and terminating at the Paradip Port.
- 6 The Highway starting from its junction near Dhulia with the highway specified in serial No. 3 and connecting Nagpur, Raipur, Sambalpur, Baharagora and Calcutta.
- 7 The Highway starting from its junction near Banaras with the highway specified in Serial No. 3 and connecting Mangawan, Rewa, Jabalpur, Lakhnadon, Nagpur, Hyderabad, Kurnool, Bangalore, Krishnagiri, Salem, Dindigul, Madurai and Cape-Comorin.
- 7A The Highway connecting Palayam, Kottary, on N. H. 7 with the Tuticorin Port.
- 8 The Highway connecting Delhi, Jaipur, Ajmer, Udaipur, Ahmedabad, Baroda and Bombay.
- 8A The Highway connecting Ahmedabad, Limbdi, Morvi and Kandla.
- 8B The Highway starting from its junction near Bamanbhor with the highway specified in Serial No. 10 and connecting Rajkot and Porbandar.
- 9 The Highway connecting Poona, Sholapur, Hyderabad and Vijayawada.
- 10 The Highway connecting Delhi and Fazilka and proceeding to the border between India and Pakistan.
- 11 The Highway connecting Agra, Baratpur, Jaipur and Bikaner.
- 12 The Highway connecting Jabalpur, Bhopal and Birsar.
- 13 The Highway connecting Sholapur in Maharashtra to Chitaldurg in Mysore.

(1) (2)

(3)

- 20 15 The Highway connecting Pathankot, Amritsar, Bhatinda, Ganganagar, Bikaner, Jaisalmer, Barmer to its junction with the N. H. No. 8A near Samakhiali (near Kandla).
- 21 17 The Highway connecting Panvel on N. H. No. 4 Mahad, Panaji, Karwar, Mangalore, Cannanore, Calicut (Kozikode) and Trichur.
- 22 17A The Highway starting from its junction near Cortalim with N. H. No. 1 and terminating at the Mormugao Port.
- 23 21 The Highway starting from its junction near Chandigarh with the N. H. No. 22 and connecting Rupar, Bilaspur, Maadi, Kulu and Manali.
- 24 22 The Highway connecting Ambala, Kalka, Simla, Narkanda, Rampur and Chini and proceeding to the border between India and Tibet near Shipki-La.
- 25 23 The Highway connecting Chas, Ranchi, Rourkela, Talcher and terminating at N. H. 42.
- 26 24 The Highway connecting Delhi, Bareilly and Lucknow.
- 27 25 The Highway connecting Lucknow, Kanpur, Jhansi and Shivpuri.
- 28 26 The Highway connecting Jhansi and Lakhnaden.
- 29 27 The Highway connecting Allahabad with the highway specified in serial No. 8 near Mangawan.
- 30 28 The Highway starting from its junction near Barauni with the highways specified in Serial No. 26 and connecting Mirzapur, Pipra, Gorakhpur and Lucknow.
- 31 28A The Highway starting from its junction near Pipra with the highway specified in Serial No. 22 and connecting Sagauli and Raxaul and proceeding to the border between India and Nepal.
- 32 29 The Highway connecting Gorakhpur, Ghazipur and Banar.
- 33 30 The Highway starting from its junction near Mohania with the highway specified in Serial No. 3 and connecting Patna and Bakhtiarpur.

(1)	(2)	(3)
31	31	The Highway starting from its junction near Barhi with the highway specified in Serial No. 3 and connecting Bakhtiyarpur Mokameh, Purnea, Dalkhola, Siliguri, Sivok and Cooh-Behar and proceeding to its junction with the highway specified in serial No. 33 near Goalpara.
35	31A	The Highway connecting Sivok and Gandak.
36	31B	The Highway connecting North Salmara to river Brahmaputra.
37	32	The Highway connecting Jamshedpur, Purulia, Dhanbad and Gobindpur.
38	33	The Highway starting from its junction near Barhi with the highway specified in serial No. 3 and connecting Ranchi and Tatanagar and proceeding to its junction with the highway specified in Serial No. 7 near Baharagora
39	34	The Highway starting from its junction near Dalkhola with the highway specified in Serial No. 26 and connecting Behrampore, Barasat and Calcutta.
40	35	The Highway connecting Barasat and Bongaon and proceeding to the border between India and Pakistan.
41	36	The Highway connecting Nowgong, Dabrika and Dimapur (Manipur Road).
42	37	The Highway starting from its junction near Goalpara with the highway specified in Serial No. 26 and connecting Gauhati, Jorahat, Kamargaon, Makum and Sankhoa Ghat.
43	38	The Highway connecting Makum, Ledo and Lakhapani.
44	39	The Highway connecting Kamargaon, Imphal and Pale and proceeding to the border between India and Burma.
45	40	The Highway connecting Jorahat and Shillong and proceeding to the border between India and Pakistan near Duli.
46	41	The Highway between the junction near Kolaghat with the National Highway No. 6, and the point where it touches Haldia Port.

(1)	(2)	(3)
47	42	The Highway starting from its junction near Sambalpur with the highway specified in Serial No. 7 and proceeding via Angul to its junction with the highway specified in Serial No. 6 near Cuttak.
48	43	The Highway connecting Raipur and Vizianagaram and proceeding to its junction with the Highway specified in Serial No. 6 near Vizianagaram.
49	44	The Highway connecting Shillong, Passi, Badarpur and Agartala.
50	45	The Highway connecting Madras, Tiruchirapalli and Dindigul.
51	46	The Highway connecting Krishnagiri and Ranipet.
52	47	The Highway connecting Salem, Coimbatore, Trichur, Ernakulam, Trivandrum and Cape Comorin.
53	47A	The Highway starting from its junction near Trichur with the highway specified in Serial No. 41 and connecting with the West Coast Road near Chajiwari.
54	48	The Highway connecting Bangalore, Hassan and Mangalore.
55	49	The Highway connecting Madhurai and Dhanushkodi.
56	50	The Highway connecting Nasik with the Highway specified in Serial No. 5 near Poona.

ANNEXURE.III

REPORT OF CHIEF ENGINEERS ON ROAD DEVELOPMENT FOR INDIA (1961-81)

Summary of Recommendations

1. Formulated in 1943, the 'Nagpur Plan' aimed at increasing the then existing length of surfaced roads from 88,000 to 1,23,000 and of unsurfaced roads from 1,38,000 to 2,08,000 miles for serving the needs of the country during the following 20 years. These mileage targets have been generally achieved and by 1961, i.e., the end of the Second Five-Year Plan period, the lengths of the surfaced and unsurfaced roads are expected to be 1,44,000 and 2,35,000 miles respectively. The road system will, however, still remain deficient in respect of road surfaces and bridges.

Vast political, economic and social changes have taken place since the formulation of the Nagpur Plan. The achievement of the mileage target laid down in the Nagpur Plan will, therefore, not be adequate for our future requirements, and a fresh appraisal of the situation needs to be made to cater for the transport requirements of our expanding economy.

The matter was discussed at the Chief Engineers' meeting held at Shillong in May 1957 as a result of which a Road Development Plan (1961-81) to meet the needs of the country for a period of twenty years from the commencement of the Third Five-Year Plan was framed. The broad principles governing the Road Development Plan and the salient features are indicated briefly in the succeeding paragraphs.

2. Of late, there has been a tendency on the part of the people to gravitate towards urban areas. Lack of amenities in our villages is one of the major causes of this trend. Provision of a good road communication system can check this trend considerably.

The future road pattern of the country should give due attention not only to urban areas but also to rural areas. In rural areas it will not be possible to serve every small village individually. It would be desirable to adopt a system of grouping villages, a minimum aggregate population of about 5,000 being taken as a workable unit.

Attention also needs to be given to the intensity and pattern of traffic. The number of motor vehicles in India has grown from 1,21,282 in 1943 to 4,18,06 in 1955 and is bound to increase tremendously in subsequent years. The demand for annual production of automobiles is estimated to increase from 78,000 in 1960-61 to about 3,70,000 in 1980-81.

3. The future road system in the country should, besides serving the highly developed and agricultural areas, also taken into account the needs of the semi-developed and underdeveloped areas, administrative headquarters, places of pilgrimage and tourist interest, health resort, universities and cultural institutions, important industrial and commercial centres, big railway junctions and ports. Strategic needs of the country should also receive due consideration.

4. The classification of roads would broadly be the same as laid down in the Nagpur plan viz., National Highways, State Highways, Major District Roads, Other District roads and Village Roads. The Plan takes into consideration only such village roads as satisfy certain minimum standard. Further, to cater for an uninterrupted flow of heavy and fast moving through traffic, some lengths of National and State Highways in highly industrialised and thickly populated areas should be designed as "Expressways".

5. India is far behind in the road mileage when compared with other advanced countries of the world. Even with the achievement of the targets of road mileage laid down in the Nagpur Plan the road length in India will be 26 miles per 100 square miles of area. It is therefore, imperative to increase the road mileage considerably, in order to meet the requirements of the growing economy of the country.

Keeping in view the limitation of funds it is proposed to increase by the end of 1980-81 the total road length from 1,31,000 to 6,57,000 miles, out of which about 40 percent of the mileage will be surfaced. This will give a spread over of 52 miles per 100 sq. miles of area. The objective is to bring every village.

- (i) in a developed and agricultural area within 4 miles of a metalled road and 1.5 miles of any road;
- (ii) in a semi-developed area within 8 miles of a metalled road and 3 miles of any road; and
- (iii) in an undeveloped and uncultivable area within 12 miles of a metalled road and 5 miles of any road.

The implementation of the Plan would involve an expenditure of about Rs. 5,200 crores as indicated below:

	Mileage		Cost in Rs. crores (improvement and new construction)
	As expected on 1-4-1961	Targets proposed in the Plan	
(1)	(2)	(3)	(4)
National Highways	13,800	32,000	930
State Highways	35,000	70,000	1,580
Major District Roads	95,200	9,000	1,360
Other District Roads	78,300	1,80,000	650
Village Roads (Classified)	1,56,700	2,25,000	630
TOTAL	3,79,000	6,57,000	5,200

6. Highway standards and specifications depend upon a number of factors such as traffic requirements, safety considerations, climatic and topographical features etc. The specifications to be adopted should, however, be such as would easily permit "State" construction so that (since funds are limited) the lowest specifications for meeting the immediate needs can be adopted to start with and further improvements carried out subsequently in stages accordance with the development of traffic.

It would be desirable to have uniformity of standards in certain fundamental aspects such as gradients, curves, sight distance, land width, etc. for similar classes of roads throughout the country. In general IRC standard should be adopted.

7. Comparatively speaking, the expenditure on road development in India is very low. In order however, to step up the pace of development of roads in the country, it is necessary to have a sustained and increasing tempo of expenditure in year to come. This plan envisages to increase the expenditure on road development from Rs. 80 crores during 1961-62 to Rs. 440 crores during 1980-81.

8. Road development and maintenance in India is at present being financed mainly from the general revenues to which most of the taxes on road transport levied by the Centre and the States are credited. The proceeds from these taxes in 1956-57 amounted to about Rs. 79 crores which practically covered the entire expenditure on development and maintenance of roads in that year. The local fund cess levied on land revenue provides an insignificant amount for rural roads.

Funds for road construction and maintenance should come not only from the direct beneficiaries, i.e. the motor vehicles but also from those to whom indirect benefits accrue from the development of roads. Some of the sources which may be tapped for raising additional resources for road developments are betterment levy; road cess on land revenue, tax on vehicles other than motor vehicles, and on diesel oil used for motor vehicles and tolls on projects of major magnitude like big bridges or specific high class roads which provide special facilities.

9. The overall expenditure on new construction and maintenance of roads during 1961-62 to 1980-81 is expected to be about Rs. 6,550 crores, and if the production of automobiles can catch up with the trend of anticipated demand, the revenue from road transport during these years will total up to about Rs. 6,150 crores. The gap of Rs. 400 crores in 20 years can be made up various ways as indicated in para 8.

10. Forward Planning is an essential pre-requisite to an efficient and economical execution of road works. Full assurance of funds from the very beginning is, therefore, necessary.

11. Besides the Central and State Public Works Departments, road works in India are at present looked after by autonomous Local Bodies, Panchayats and Community Development Administrations. Financial limitations and difficulty in attracting suitable technical hands have, however, been a serious handicap with most of our local bodies as a result of which their supervision of road works has not been very fruitful. Provincialisation of the engineering staff of the Local Bodies should improve matters considerably.

12. For ensuring efficient execution and maintenance of roads, all classified roads except the classified village roads, should be under the State or Central Public Works Departments, or the Highway Departments as the case may be. The Classified Village Roads may be under the panchayats to whom the State Public Works Departments should give necessary technical advice.

13. National Highways should be entirely the responsibility of the Centre as at present. All other classified roads should be the responsibility of the State Governments.

14. Design, construction and maintenance of highways are intimately connected with traffic development and safety requirements. The Highways Department in the States should therefore, have a suitable cell to deal with traffic engineering road standards sizes and weights of vehicles, and provision of amenities for road users.

15. Close technical co-ordination is essential to ensure an efficient and successful implementation of the Plan. The present method of utilising the forum of the Indian Roads Congress for achieving this objective has proved successful and should be continued.

16. With the enormous growth of traffic the technique of highway construction and maintenance needs specification. It is, therefore, necessary to provide a two years' course for professional training in the department at the commencement of service. The practising highway engineering should also be kept abreast of development highway engineering and technique by providing refresher courses.

17. Land acquisition proceedings at present take inordinately long time which results in delays in the execution of road schemes. Appointment of special land acquisition officers working under the Chief Engineers would improve matters considerably.

18. The present procedure of tackling encroachment cases through courts is very ineffective. The question of vesting necessary authority in the road engineers so as to enable them to take direct action needs consideration.

19. Research plays an important role in road development. All the States should have well-equipped road research laboratories. To begin with testing and control laboratories should be provided immediately, some of which could gradually develop into full-fledged research centres. A detailed and organised survey of road building material should be carried out. The co-ordination of research activities of the various laboratories should be done by a Central Organisation.

20. On arterial routes, missing bridges should be given the highest priority and the hard crust should be widened to two lanes and upgraded to withstand the load of heavy truck-trailer combinations. High priority should also be given to improvement of rural roads to fair weather standard, including the provision of cross drainage works, so that traffic is not dislocated too frequently.

21. Full benefit from expenditure on road construction can be derived only by ensuring proper maintenance of the roads. The expenditure on the maintenance of roads in India has so far been inadequate. The requirements of annual maintenance are expected to rise from about Rs. 30 crores in 1960-61 to Rs. 135 crores in 1980-81. Steps have, therefore, to be taken to provide adequate funds for this purpose.

22. Road construction and maintenance can provide employment for a very large number of skilled and unskilled labour. It has been estimated that the number of skilled and unskilled labour required for implementation of the Plan would rise from about eight lakhs in 1961-62 to 42 lakhs in 1980-81.

23. As regards technical personnel, it would be necessary to increase the annual intake of graduate engineers from about 400 in the 1st year to about 750 in the 20th year, diploma holders from about 1,140 in the first year to 2,150 in the twentieth year and other technical personnel (draftsmen, tracers, surveyors etc.) from about 1,200 in the first year to 2,400 in the twentieth year.

24. The requirements of roads making materials and transport vehicles has been estimated as follows :

Road Making Materials

	First year Tons (‘000)	20th year Tons (‘000)	Total for 20 years Tons (‘000)
(1)	(2)	(3)	(4)
Cement	400	2,000	24,000
Bitumen	300	1,200	15,000
Mild Steel	60	340	4,00
High tensile steel	5	25	3,000
Special Cast steel for bearings (Bridges)	1	7	80
Transport Vehicles	First year		20th year
Trucks	8,000		30,000
Bullock-carts	30,000		1,10,000

25. There is in the demand of road making machinery will be very appreciable in certain cases, as the plan progresses. For instance, the requirements of road-rollers will rise from 2,400 in the beginning to 6,400 towards the end of the plan and that of the motor graders from 400 to 1,200. A consolidated list of equipment required for the implementation of the Plan is given in the Report.

26. Certain types for road-making machinery like flat rollers, sheep-foe rollers, pumps, stone crushers, tar boilers and concrete to mixers are already being manufactured in the country. Their rate of production is however, not adequate and needs to be stepped up. Steps need to be taken also to start manufacturing motor graders, bitumen mixers and bitumen pressure distributors because the number required is quite appreciable. A concerted effort is necessary to step up the manufacturing programme of all road-making machinery already being produced in the country and to devise ways and means to commence manufacturing other machinery.

27. As it will take some years before heavy earth moving equipment and some other types of road making machinery are manufactured in the country it would be necessary to import such equipment from abroad for some years. It has been roughly calculated that this will involve foreign exchange of about Rs. 80 crores from 1961 to 1981.

ANNEXURE IV

MAIN FINDINGS & RECOMMENDATIONS OF THE COMMITTEE ON RURAL ROADS

A one man committee was set up by the Ministry of Transport, Government of India under the Chairmanship of Shri H. P. Sinha, in 1967 to study and report on the problems of development of Rural Roads in the country. The Report was published in 1968. The main tasks of the committee were as follows :—

- (i) To advise on the broad principles for the preparation of a phased programme for the development of rural roads to enable optimum utilisation of available resources from various directions for such roads;
- (ii) To suggest methods for ensuring that specific resources are earmarked for the construction of rural road;
- (iii) To indicate the basis for determining *inter se* priority between various categories of rural roads in the States;
- (iv) To advise on measures for the planned execution of the rural road programme, and on coordination of the work of the various agencies employed at present in states on rural road construction;
- (v) To advise on measures for the proper maintenance of rural roads; and
- (vi) To advise on the mechanisation of rural road construction, maintenance and effective measures for obtaining the necessary maintenance equipment.

Scope of Rural Road

The committee defined Rural roads as those roads which serve predominantly the needs of villages and provide communication, not only between one village and another, but also from one village to mandis (market place) or to a main route. The rural roads will include village roads and other District roads only.

Target of Work

The Committee has suggested that the targets for road development for the next 20 years need not be kept any higher than those indicated by the Chief Engineer. Therefore, the Committee envisages the development of a total length of 3,24,000 Kms. of village roads and 23,04,000 Kms. of other District roads. The cost will be Rs. 535 and Rs. 895 crores respectively i.e. total Rs. 1,430 crores.

Main Recommendations

Resources for Rural Road Development

For achieving targets of the Chief Engineer's 20 years plan, the Committee has suggested that the capital expenditure required should be spread out as follows:—

4th Plan	Rs. 265 crores
5th Plan	Rs. 335 "
6th Plan	Rs. 385 "
7th Plan	Rs. 445 "
<hr/>	
TOTAL	Rs. 1,430 crores
<hr/>	

At least 1/3rd expenditure on capital works should come as contribution from the people. The money so contributed should be utilised in that very area. There should be an assurance of minimum fund for the Rural Roads Programme. For this purpose a portion of specific revenue which pertains directly to roads (such as diesel tax) might be earmarked. It is estimated that Rs. 150 crores were collected through diesel tax in 1967-68 and this amount would rise to Rs. 220 crores by 1971. Each State should pool together all the resources earmarked for developing Rural Roads and should spend through a unified agency. The Committee estimated the maintenance expenditure at Rs. 15 crores per year in the 4th Plan period which could rise to Rs. 50 crore per year in the 7th Plan period. The fund for this purpose should, in full, be arranged by the Government and Local Bodies. As a measure to reduce the maintenance expenditure, the Committee suggested that the Government should promote the use of pneumatic tyred wheels in bullock carts by subsidising half of the cost involved in the initial change-over and by other incentives like tax rebate on pneumatic tyred carts and by giving preference to rural road construction in those areas where this change is accepted by the

Basis for Inter-se Priority

The Committee has suggested the following four priorities in phasing the 20-year rural road development programme :—

- | | |
|---|-----|
| (i) Areas where special steps have already been taken for rapid increase in agricultural production, e.g. under the programme of Intensive Agricultural Districts | 40% |
| (ii) Areas where villages will get connected to the existing road system by constructing just few short lengths of rural roads | 20% |
| (iii) Backward area | 20% |
| (iv) Areas where no other means of transport are available | 20% |

Organisation Set-up

In order to have effective coordination in the widely dispersed works of Rural Roads, it is necessary to have a high level Board in each State for examining the broad aspects of planning and allocation of funds, as well as for evaluating the progress. A similar body at the Centre is also necessary. These bodies should be presided over by eminent persons and the membership should be drawn from :

- (i) Member of Parliament and Legislative Assembly.
- (ii) Member of Local Bodies.
- (iii) Senior Government Officers of concerned Department.

For receiving undivided attention, all the rural works, in a State should be looked after by a separate full-fledged Engineering Department headed by a Chief Engineer. Till such time, the work load does not justify the creation of a separate cell for rural roads, it should be put under the charge of Chief Engineer of some Engineering Department e.g. Highway Department, but the charge of actual execution should be given to an officer of the rank not less than Executive Engineer.

The smaller Local Bodies, namely the Panchayat and Panchayat Samiti should be given maximum powers as their works will be small and of local importance. There should, however, be coordinating committees in district and regional levels for works pertaining to the Zila Parishads.

Maintenance of Rural Roads

The Committee attaches importance to the maintenance of the rural roads. Since the past experience shows that major part of the village road constructed by the Department of CD & NES has vanished due to lack of proper maintenance. A judicious use of men and machines, will provide the most of appropriate answer to the vast problem. The Committee recommended the use of motor grader for maintenance of roads. Some relief may be given by the Government by waving off or reducing custom and excise duties on motor grader.

Maintenance and Utilisation of Machinery

For economy and efficient utilisation of machineries the Committee has suggested that a pool of machinery should be formed for 5 to 6 Districts with spare part facilities and formation of Central workshops for providing repairing facilities for the equipments.

ANNEXURE V

SUMMARY OF RECOMMENDATIONS OF THE STUDY GROUP ON MOTOR VEHICLES TAXATION

Central Series

1. The Union Government should set up a Central Bureau for studying the problems of taxation on motor vehicles on a systematic basis. This Bureau can follow the guidelines that the Road Transport Taxation Enquiry Committee may formulate, balancing from year to year, the need for ensuring uninterrupted flow of trade and commerce with the ways and means requirements of the various States.

The Motor Vehicle Tax

2. The Inter-State Transport Commission should allocate the number of regular permits for Inter-State routes, taking into account the stages of transport development in the different areas and also their traffic requirements. The Commission should keep the current revenue of the States from motor vehicles also in view while determining the number of inter State permits that may be issued by each of them. The States, which are unable to issue all the permits that they are entitled to, should devise suitable incentives to induce expansion of their vehicle registrations instead of resorting to taxation of vehicles registered elsewhere.
3. The distinction between temporary and regular permits in the matter of taxation should be given up simultaneously with conversion of temporary permits into a reasonable number of regular permits.
4. Immunity from tax should be extended to all corridor routes of a length of 50 miles and less subject to the condition that the vehicles do not pick up or deliver passengers or goods within the corridor. This immunity should cover passengers and goods taxes also, if the States do not see their way to accepting any of the alternatives to these taxes.
5. The tax assessed in respect of each vehicle should be correlated to the weight restrictions, if any, laid down for the route or area covered by the permit of the vehicle. In other words, the tax on the vehicles should not exceed what is payable on the basis of its permissible laden weight for that area or route, unless the vehicle can carry its full load over a good part of that area or route.

6. Tax should be classified not merely according to the actual carrying capacities of motor vehicles and the load limits enforced on different routes but also with reference to the length and traffic potential of route or area of operation for which a permit has been issued. An *ad-hoc* reduction of 25% to 50% of the normal rates, depending on the operational conditions obtaining in the urban or rural area concerned may be justified.
7. A graded scale of tax, based on the distance covered by a vehicle outside its home State and not on the number of States through which it passes or the rates of taxes in force in those States, may be adopted. The tax liability in respect of routes outside the State limits may be fixed with reference to an absolute all-India standard. It may be Rs. 2,500 per annum for a vehicle which has a pay-load upto 7 tonnes (corresponding to RLW upto 11 tonnes) or Rs. 3,000 for a vehicle which has a pay-load of over 7 tonnes (RLW of over 11 tonnes) and which has a permit for a route 600 miles or above in length outside the home State. The extra-state route mileage may be reduced by 50 miles for the purpose of the calculation.

8. The standard rate may be divided into the following slabs:—

Distance	Tax-Payable
First 50 miles outside the "Home State" (The state of registration of vehicle)	Nil
From 51 to 150 miles outside Home State	25% of the Standard tax.
From 151 to 350 miles outside Home State	50% of the Standard tax.
From 351 to 600 miles outside Home State	75% of the Standard tax.
Over 600 miles outside Home State	100% of the Standard tax.

9. The standard tax proposed above takes goods/passenger tax payable by a vehicle into account and, therefore, there should be no additional liability for these taxes in any State other than "Home State".

10. On a balance of considerations, the second best alternative to a standard-inter-State tax should be an additional Central Fuel Import or diesel oil.

11. If the Standard Tax, recommended in para 7, is introduced or excise duty on diesel oil is increased by just over a paise per litre, the revenue that the "transit" States may forego, if they exempt outside vehicles with inter-State permits from motor vehicles, goods and passenger tax, will be more than made up.
12. A working formula for distribution of the proceeds of the additional diesel levy among the different States can be framed with reference to the sum of (a) length of surfaced roads in a State and (b) 25% of the length of the National Highways in the State. The needs of areas like Delhi, Goa etc., which do not have large road mileage but the traffic importance of which is considerable, can easily be met by reserving for them a percentage of the total revenue collected before distribution as above.
13. Implementation of the above arrangements will necessitate suitable amendment of the State Motor Vehicle Taxation Acts and the Taxation on Passenger and Goods Acts. The States will have to provide for levy of the Standard inter-State tax in lieu of the local taxes and for the assessment and collection of the levy, on behalf of the States or its agents, by other States.

Passenger & Goods Tax

14. The distinction between vehicles which carry goods for hire or reward and those which carry the owners' own goods has no justification. There had been a steady increase in the number of trucks operated "on own account" as against public haulage vehicles as a result of the existing licensing and taxation policies; and thus, an undesirable trend which requires to be arrested.
15. The taxes on goods and passengers carried by road should be merged with the tax on vehicles. Such consolidation does not imply a reduction in the aggregate revenue, since the tax on motor vehicles, which is elastic, can be raised to a sufficiently high level to cover the current and expected revenue from all the taxes together. If, however, this proposal is not acceptable to the State Governments, vehicles registered outside the State and plying on inter-State routes should be exempted from the local levies, by adoption of the Standard Tax recommended in para 7 above.

Motor Vehicles Fees

16. Fees are meant to cover cost of administration. A consistent and rational scale of fees or a formula, commensurate with the actual cost of the services rendered should be drawn up on all-India basis. In working out any scale or formula, it should be borne in mind that (i) countersignature or renewal of a permit does not call for any significant additional labour and that not more than a small proportion of the fee payable for such services in respect of the original permit should be levied, (ii) it would not be expedient for a State to have two sets of fees, one for vehicles registered in the State and another which

is higher, for vehicles registered outside, and (iii) the value of a route or area, permit of the registration of a vehicle etc. to the operator concerned would be an extraneous factor in the assessment of fees.

Local Levy (Octroi etc.)

17. Octroi is an incurably bad levy. It should either be replaced by a more rational and less primitive form of taxation or suitable increases should be made in the rate of the existing taxes to make up for the diminution in resources, which its abolition may entail.

18. The following suggestions, which have been made from time to time by various bodies individuals in connection with the proposal to abolish octroi should be implemented by the States with reference to their individual needs and circumstances:—

- (i) Imposition by State Government of surcharge on sales tax on specific commodities with reference to local conditions and needs;
- (ii) a turnover tax depending on sales of certain commodities within municipal limits;
- (iii) earmarking of a portion of States' revenue from motor vehicle tax and its distribution among the concerned municipalities on the basis of their population, financial requirements, importance from the traffic angle etc.;
- (iv) construction of by-passes sufficiently far from municipal limits to avoid extension of the limit to envelop them; and
- (v) provision of a radial freeway, where feasible, for "through" or transit traffic.

Cognate Matters

19. Multi-purpose check-posts for sales tax excise and motor vehicle etc., equipped with automatic ticket weight bridges may be installed, where necessary, inter-State borders to be manned jointly by officers of the States concerned either by the rotation or simultaneously.

20. The State Government may provide check-posts with rest-rooms and canteens for drivers, garages or repair for vehicles, and mobile break-down vans for dealing with vehicles which may be obstructing traffic on the highway.

21. The procedure in Mysore, where transport companies are not being asked to unload goods if they undertake to deliver them to consignees only after they furnish the necessary documents to the sales tax department, may be adopted in the other State also.

22. The forms that are used by operators should be standardised so that they become self-explanatory. The Union Ministry of Transport might review each of the forms that a vehicle has to carry for different purposes in consultation with the State Governments.

23. Additional information with regard to the value of the consignment, sale tax registration number of the consignor and consignee and confirmation that the sale tax has been or will be paid may be included in the form of way-bill evolved by the Transport Ministry in 1963.

24. The State Governments should advise their enforcement authorities not to attach undue importance to minor details and inconsistencies while checking vehicles at the barriers.

25. Federal standards and procedures should be prescribed for the various aspects of operation of vehicles of inter-State routes so as to achieve uniformity.

26. The State Governments may, as a convention, refer all disputes relating to motor vehicle taxation on inter-State routes to arbitration by the Inter-State Transport Commission.

27. Collection of all the taxes on motor vehicles, including goods and passenger taxes, should be entrusted to a single agency, preferably the department which issues permits for transport vehicles.

28. Operations' organisations should be built up for providing a "tax service" to their members. This machinery can also be employed to make the operators alive to their rights and duties and to distribute standard forms, way bills and other statutory returns etc., among the operators with suitable instructions for their maintenance and submission. Such a service can be introduced in cities where there is heavy concentration of commercial vehicles, e.g. Bombay, Calcutta, Delhi and Madras and can be extended to other places in due course.

ANNEXURE VI

SUMMARY OF THE RECOMMENDATIONS MADE BY THE ROAD TRANSPORT TAXATION ENQUIRY COMMITTEE

A. Recommendations made in the interim report "Inter-State Transport"

- (i) There should be central legislation to lay down uniform principles of taxes (on motor vehicles) and licensing thereof for the whole country. The Government should examine whether the existing entry 42 in the Union List in the Seventh Schedule to the Constitution covers taxation on motor vehicles engaged on inter-State routes. If this is not so, the Constitution may be amended suitably to provide for control of taxation on inter-State transport by the Inter-State Transport Commission.
- (ii) A commercial vehicle should be registered in the State where it is normally kept and a primary permit in respect of it issued by the 'home' State. The vehicle will pay all the necessary taxes to that State, including road tax and tax on passengers and goods carried in the vehicle. A vehicle, which desires to carry inter-State traffic, will have to obtain an additional permit (which will be, in fact, an extension of the primary permit) which should be granted by the Inter-State Transport Commission. The legislation that may be undertaken by the Government of India or empowering the Commission to collect taxes in inter-State transport should specifically provide for the assignment to State of the proceeds of the levy so imposed and the principles of distribution thereof. The quantum of tax to be paid by vehicles employed in inter-State transport should be settled after consulting the State Governments.
- (iii) The Inter-State Transport Commission should be reconstituted ~~as~~ ^{now}. The reconstituted Commission should be given all the powers at present mentioned in Section 63(A)(2) of the Motor Vehicles Act and also the powers mentioned in the Rules framed under Section 63-G of the Act by including them in the substantive law. The Commission should have a Chairman of a high status, preferably chosen from public life and two other full time members, who have wide experience of administration or transport or finance or economics. The Commission should have a high status similar to that of Union Public Service Commission, Forward Markets Commission, Tariff Commission, etc.

B. Recommendations made in the interim report on "Octroi and other Check Posts".

- (i) Octroi (including terminal tax and tolls) is a vexatious and out-moded form of taxation and should be abolished as quickly as possible in the States, where it is still levied.
- (ii) The loss in revenue due to abolition of octroi/terminal taxes may be made up by alternatives, such as surcharge on sales tax, Municipal sales tax, Municipal surcharge on sales tax and Municipal turnover tax or a combination of these. According to the Committee the Municipal turnover tax is preferable. But it should be left to each State Government to select the alternatives which suit them best.
- (iii) Section 15 of the Central Sales Tax Act places certain restrictions in respect of the rate of sales tax or purchase tax on "declared goods" specified in Section 14 of that Act. In levying municipal sales tax or turnover tax, these restrictions may be relaxed and the Central Government may allow States to levy tax on sugar, tobacco and textiles without forfeiting their share of additional excise duty.
- (iv) The existing check posts, set up by the State Governments are a great impediment to movement of traffic and slow down traffic. The system of check posts should be completely reorganised and the number of check posts reduced to the minimum. The multiplicity of check posts such as those for Sales Tax, Transport Department, Police, Prohibition, Smuggling, Forest and Civil Supplies Depts. may be converted into a consolidated check post organisation created to serve the needs of the various departments concerned.
- (v) The combined check posts should be equipped with ticketed weigh-bridges and should be located at sufficiently long distances.
- (vi) The system of flying squads may be adopted for further checking and motor vehicle offences may be dealt with by Mobile Courts.

The above recommendations raise issues of policy which require careful consideration. Moreover, matters relating to abolition of octroi and its replacement by one of the alternative levies, suggested by the Road Transport Taxation Enquiry Committee, primarily concerned the State Governments.

C. Recommendations contained in the final report

The final report of the Road Transport Taxation Enquiry Committee was submitted to Government on 29-11-67. The following main recommendations have been made in its report :

- (i) The existing level of taxation on motor vehicles Central and State, has become a disincentive to the growth of road transport industry.

Some relief should be given, or at least no further changes, should be made in the existing level of taxation, except after mature consideration in the light of the principles enunciated by the Committee and with reference to the advice of the expert advisory bodies proposed in (ii) below.

- (ii) The Central and State Governments should set up standing expert advisory bodies consisting of persons who have special knowledge of problems relating to road transport industry/administration/economics/finance to review, from time to time, the working of the road transport industry with special reference to the impact of taxation thereon and formulate suitable proposals for consideration of the Government concerned.
- (iii) In determining the quantum of any tax, the following principles should be taken into consideration, in addition to the financial requirements of the States:
 - (1) Cost of operation.
 - (2) Prevailing fare and freight rates.
 - (3) Utilisation of vehicles as detailed below:—
 - (a) Distance travelled.
 - (b) Frequency of services.
 - (c) Carrying capacity.
 - (d) Load factor.
 - (e) Area of operation.
 - (4) Capacity of the industry, the transport users and the public to bear the tax burden.
 - (5) The general level of development in the region and nature of terrain.
 - (6) General price level prevailing in the State.
 - (7) Programmes of road construction and maintenance; and
 - (8) Impact of the growth of economy.
- (iv) The above principles should apply to all taxes levied by the Centre and States.
- (v) Parliamentary legislation should be enacted, laying down uniform principles of motor vehicles taxation throughout the country.

- (vi) The number of taxes affecting motor vehicles should be reduced to the minimum and it would be preferable for all the States taxes to be collected by a single agency. Fuel tax is an ideal way of realising revenue from motor operation.
- (vii) Uniformity in tax procedures in the first step for rationalisation of the tax structure on an all-India basis. It is, therefore, necessary to have, in the first instance, registered laden weight, as the basis for computation of motor vehicle tax for goods vehicles.
- (viii) In the case of state carriage, in addition to carrying capacity, the basis of motor vehicle tax should be the permitted daily mileage.
- (ix) State carriages operating on short routes with low frequency of services should be given tax rebate.
- (x) The Central and State Governments should consider a concessional rate of tax for light commercial vehicles of a pay-load of 1 tonne or less.
- (xi) Government should take early and urgent measures to bring down the prices of commercial vehicles substantially.
- (xii) Because of the nature of the road transport industry, it is desirable to allow it to earn a return on capital larger than that in other industries.
- (xiii) If the country is to benefit from the contribution which roads and road transport should make to economic and social development, there is no escape from earmarking considerably more funds for development and maintenance of roads than is done at present.
- (xiv) There should be uniform permissible laden weights in all States, on inter-State routes and particularly on National Highways. Expeditious action is necessary to bring all National Highways to the required specifications in the interest of promotion of tourism and the cultural and emotional integration of the country.
- (xv) Contract carriages, running on regular temporary or special permits outside the Home State, should not be required to pay any other tax or fee in the States travelled by them.
- (xvi) While it is necessary to subject goods vehicles operating outside the home State to an additional tax, known as inter-State Standard Tax. Inter-State passenger vehicles need not be subjected to such additional tax liability at present.
- (xvii) The committee does not recommend regulation of freight rates by State Governments. This should be left to be determined by the conditions of demand and supply.

- (xviii) Goods booking agencies should be regulated and this business be brought under control by a licensing system.
- (xix) Development rebate which has been withdrawn, should be stored for the expansion of road transport which should be included in the list of priority industries entitled to tax relief.
- (xx) It should be ensured that adequate supply of capital is available to private operators and State Road Transport Undertakings for purchases of vehicles.
- (xxi) Tax should not be levied in the guise of fees which are to be charged for specific services rendered.

ANNEXURE VII

SUMMARY OF CONCLUSION AND RECOMMENDATIONS MADE BY THE STUDY GROUP ON ROAD TRANSPORT FINANCING

1. The Study Group have estimated that the amount of the loans and advances to be provided from organised institutions to the operators will have to be increased to Rs. 100 to Rs. 125 crores per annum in 1970-71, as compared with about Rs. 60 crores at present. Therefore, the additional requirements might be about 10 to 15 crores every year during the next five years.
2. The capital cost of a commercial vehicle has been increased already, mainly because of government levies, upto a point at which further investment by transport operators on new vehicles and the replacement of the existing vehicles is becoming difficult. Government and the automobile manufacturers must explore ways and means of arresting any further increase in prices, and if possible of reducing the cost and improving the quality of the vehicles.
3. Government's decision on the report of the Road Transport Taxation Enquiry Committee under Dr. Keskar, should be taken and announced very early. As far as possible, the need for establishing and reducing taxes should be taken in consideration. The additional revenue, resulting from an accelerated rate of development of road transport, will in the opinion of the Study Group adequately compensate the Governments for any restraint in increasing the level of road taxes any further.
4. In the interest of making transport by roads safe and more attractive godown and storage facilities, insurance of goods while in transit and standardisation of commercial practices relating to the treatment of lorry receipts as documents of title for goods will be necessary. Commercial banks and insurance companies, respectively, should provide the necessary facilities for this purpose.
5. The study group has recommended that in the interest of orderly growth of hire-purchase finance in this country and financing of the road transport industry in particular, high priority should be accorded to the Hire-Purchase Bill and it should be enacted and brought into force as early as possible and its provisions should be applicable to motor vehicles in the same manner and to the extent as in the case of other goods. The Study Group has further suggested that it is not at this stage necessary to provide for licensing of hire-purchase finance companies.

6. The liberal interpretation of the provisions of Section 3 of the Banking Regulations Act, 1949, permitting banks to obtain certain types of documents or safe-guarding their interests, while advancing loans directly or indirectly to transport operators, should be brought to the notice of the banks concerned.

7. The development rebate, which was originally granted to the road transport industry, should be resorted. The road transport industry should also be treated as a priority industry, entitled rebate from income tax at a rate of 8%. Companies and Corporations entitled to this rebate should agree to refund the amount of this rebate, for the purpose of financing the acquisition of new or the replacement of old vehicles.

8. The study group has suggested that after the other recommendations in their report have been accepted and implemented, the question of simplifying the scheme for guaranteeing loans and advances granted to small scale industries so as to cover the small road transport operators, should be considered by Central Government in consultation with the Reserve Bank of India.

9. The manufacturers of automobiles and the larger dealers should consider whether new hire-purchase finance companies cannot be promoted by them for mobilising resources and assisting the operators.

10. The existing hire-purchase finance companies should, with a view to qualifying for assistance from commercial banks and Industrial Development Bank of India, improve the methods of working and operation, particularly by (a) conforming to the directions issued by the Reserve Bank and maintaining register in the form of the returns prescribed by the Bank, (b) segregating the cash credit accounts relating to hire-purchase transactions, which are eligible for finance and (c) increasing their paid-up equity capital, free reserves for bad and doubtful debts and contingency or inner reserves, over a period or time.

11. The State Road Transport Authorities should carry out a systematic survey of the areas in which road transport can be developed, within the respective States and the State Financial Corporations should consider the grant of direct loans to larger number of transport operators.

12. Transport Cooperatives providing specialised and service facilities to the road transport industry should be promoted, wherever this is feasible, and the question of establishing cooperative hire-purchase finance should also be examined.

13. As a measure to augment more resources, the Road Transport Corporations in the public sector should also consider whether, like State Electricity boards, they can borrow certain limited amounts in the open market against the guarantee of the concerned State Government. For this purpose and also on other consideration, the public sector Road Transport Undertakings, which are not already incorporated under the Road Transport Corporations Act, 1950, should be constituted as independent autonomous Corporations.

ANNEXURE.VIII

SUMMARY OF THE RECOMMENDATIONS OF STUDY GROUP ON VIABLE UNITS

(i) There should be a network of transport associations in the country, the last ring in the ladder being viable units. In each district, road transport associations should be formed. These viable units might be affiliated to District Associations, the District Associations should, in turn, be affiliated to State Associations and State Associations to all-India Road Transporters Association. That is to say operators should find themselves associated not merely, at the district level but should also find their way to national levels. The Group feels that the cause of road transport industry will be better served, if the industry is suitably recognised so that the operators are able to ventilate their grievances and seek redress in an effective manner through the forum of association.

(ii) A viable unit should consist of at least 10 vehicles in goods transport and 5 stage carriages with a spare bus in the case of passenger transport. (The group did not recommend a spare truck for viable unit in goods transport). In recommending the above size for stage carriages, the group has assumed a stage carriage will do 36,000 miles in a year.

A viable unit can be formed of:—

- (a) an individual;
- (b) a proprietary or partnership form;
- (c) a joint stock company, public or private;
- (d) a registered co-operative society, including service co-operative;
- (e) an association of vehicle owners to be duly registered under law to be framed for the purpose, if necessary.

(iii) The test of viable unit in the transport field is that it should have (a) a Central or unified organisation of any character, servicing (b) provided

activities for booking of goods and passengers; and (c) provide repairing and other facilities. Such a viable unit should be recognised under the Motor Vehicles Act.

(iv) In the matter of granting permits, although for an effective control over the vehicles of the viable units, permits should be granted in the name of viable units yet the group felt that it may not be advisable to do so, at this stage when a considerable number of single operators exist in the country.

(v) To encourage the small operators to form viable units, they should be given incentives in the nature of 10% rebate on motor vehicles, tax for the first 5 years, preference in the matter of counter-signature, rebate in insurance premium and other such facilities which are available to big fleet owners.

(vi) Persons having ten trucks or five buses in the aggregate can join together and form an Association to be duly registered for providing servicing and repair facilities, making arrangements for booking and forwarding of goods and such other functions which will ensure more efficient services. Every such association should be a registered body and should discharge all such duties as may be prescribed by the State Governments. In such a set up, the property rights over the vehicles will continue to remain with the owners of the vehicles and will not vest with the Association. In the same way, the permits will also remain with the member-operators, while the Association stands as an independent organisation giving service facilities to its affiliated members. Although such an association will not itself be a viable unit, the members thereof will be considered as members of a viable unit and would be entitled to the same facilities and incentives as any other viable unit.

If, for any reason, any member of a viable unit is dissatisfied with the working of the unit, he may recede from that particular unit and join another unit in the area. However, a member operator should not be allowed to exercise this option other than once in a year.

(vii) Small operators can also organise themselves into service co-operative societies or providing the common facilities. The members of such a society will also be considered as members of a viable unit.

(viii) There should be no compulsion by State Governments in the formation of viable units. These units should spring up voluntarily and spontaneously.

(ix) In the interest of proper development of road transport, Government should take steps to educate small operators on the desirability of formation of viable units. If, in spite of the incentives, a single vehicle operator is not willing to join a viable unit, he will still be allowed to continue to function.

(x) The State Government may have to incur an expenditure of about Rs. 6 crores per annum on account of tax rebate to viable units. The share of each Government will not exceed Rs. 50 lakhs per annum. This according to Study Group's estimate, will give the industry an additional income of Rs. 40 crores per annum and would create a demand for 4000 additional vehicles per annum. This in turn would increase the State resources.

(xi) To remove the uncertainty in the mind of private operator in regard to nationalisation of road transport service the Government should draw up and publish their time-schedules of nationalisation of passenger transport.

Likewise, they should also examine whether it is necessary to enter the field of goods transport and, if so, formulate specific schemes in this regard for inclusion in the plans. If this is done, operators will know where exactly they stand vis-a-vis nationalisation and will be encouraged to invest in the road transport industry because they will have the certainty that they will not be dislodged from their present business for a reasonable period.

ANNEXURE IX

MAIN CONCLUSIONS AND RECOMMENDATIONS OF THE COMMITTEE ON TRANSPORT POLICY AND CO-ORDINATION

The committee on Transport Policy and co-ordination was set up in July, 1959, under the chairmanship of Shri K. C. Neogy. The Committee Submitted its report in 1966. The specific recommendations of the Committee are:—

1. Road Development and Road Policy

Roads are so crucial to national and regional development and resources involved are of such substantial magnitude that the careful planning and constant search for economy must be regarded as the keystones of road programmes in future, whether these are undertaken by the Centre or the States or by Local Authorities.

In view of the large investment involved, the Committee recommended adoption of economic criteria in the selection of road works to the utmost extent possible cost benefit analysis.

The road plans should take full account of the industrial and other development needs as these are likely to arise over a period of years. The specific recommendations of the Committee on road planning are :—

1 Centres should develop the National Highways system steadily since these form the important trunk routes. The Centres should increasingly assist in the construction of selected roads which provide inter-State links and have specific economic importance because these roads are a convenient and flexible means of removing important gaps in communication between states and also these roads are important both from national and regional point of view.

2 The state, on the other hand, should pay more attention to the development of rural roads and improvement of road communication in the economically backward areas. In case of rural roads, priority should be given to areas in which intensive agricultural development plans are being undertaken or where new resources, such as irrigation and power, have come into use and their fullest utilisation along with complementary development is likely to promote rapid economic growth.

3 For the development of rural roads, the State should earmark a certain portion of their funds—a minimum of the 1/5th of the State allocation for roads. Centre should give assistance for development of rural roads as well as roads in the backward areas. The amount of grant in both the cases should be 1/3rd of the outlays incurred on them by the State.

4 In the metropolitan areas and other large cities, it is necessary to take long term view of transport needs, both for passengers and for goods. The transport planning in the cities has to be closely related to the scheme of long term urban planning and location of industrial and economic activity.

5 Suitable norms should be established for the maintenance of roads especially National and State Highways.

6 The Committee diltted the recommendation of the Transport Development Council on the creation of Road Planning Board, both in the Centre as well as the States. These boards will consider plans of road development in the wider economic perspective and in relation to the economic and other criteria. Their task will be to ensure that roads can make maximum contribution to economic development.

7 In the interest of systematic long term road development, the Committee has stressed that the resources available from Central Road Fund at the Centre need to be enlarged. A flexible non-lapsing source of this nature, from which certain types of specific schemes can be initiated by the Centre has advantages which are not to be measured only by actual amount allotted.

Besides the above specific recommendations, the Committee made a number of other, recommendations, vital for the construction of better roads. Precisely those are :—

1. Adoption of modern and advanced techniques in road construction. This would require opening of testing and control laboratories in all States which would work in association with Central Road Research Institute.

2. Setting up of a Highway Research Board at National level for collection and dissemination of the results of research done in the various laboratories.

3. Setting up of necessary organisation to check up that the research methods recommended for particular road works are properly applied.

4. To gain speed in operation and to ensure control over quality, road construction equipments should be manufactured within the country.
5. Creation of a central road construction agency with the Central Government which can supplement the State agencies to the extent necessary and.
6. Setting up of separate Highway Departments with the specialised highway and bridge engineering personnel for technical guidance and supervision in States where volume of road construction work is quite large.
7. Setting up of special Traffic Engineering Cells, in the Highway or Public Works Departments of the States devoted to and equipped for task of carrying out traffic studies and giving attention to the problems of traffic engineering and road safety.

II. Road Transport

The regulation of road transport, conceived as a tool of planned and co-ordinated development, rather than as a restrictive device, has a functional role in the development of road transport in keeping with the growing needs of the economy and as an integral part of the total transport system of the country.

The following are the main recommendations on—

Passenger transport

1. Although passenger services have to be licensed for specified routes, yet for future development of passenger services there is need for a regional approach. Such an approach stresses the requirements of local economy, helps adapt the forms of investment to the needs as established, ensures closer coordination with railway services and provides a continuing test of progress in reaching into the interior.
2. Special steps (like tax concession to operators etc.) should be taken to encourage the rapid growth of passenger road transport in backward districts and regions.
3. Inter-State passenger services should in future be licensed under the authority of Inter-State Transport Commission which no doubt will act in consultation with the States concerned. The present system of reciprocal agreements for number of permits to be issued should be abandoned.

The following are the main recommendations on goods transport.

Intra-State Movement

In case of intra-State Goods Transport the concept of 'Region' as defined in the Motor Vehicles Act and the functions performed by the Regional Transport Authorities in the States (counter-signing permits) do not suit the needs

if the present time. For healthy development of road transport within the State, the focus in the regulation of road transport should shift from Region to State and its economic needs and also from Regional Transport Authority to State Transport Authority.

However, for development of certain backward regions, where transport facilities have considerably lagged behind the Committee recommended the need for integrated transport plans with special emphasis on the development of road network and to an extent licensing of vehicles on a regional basis accompanied by concessional tax rates and other incentives to operators to provide transport services in these regions.

Inter-State Movement

In case of long distance inter-state goods movement there is need for a powerful Inter-State Transport Commission (may be redesignated as Inter State Road Transport Commission) with a full time Chairman, having wider powers and functions. The present practice of reciprocal agreement should be replaced by a system of inter-State permits, issued under the authority of the Inter-State Transport Commission. This body will work in close collaboration with the State Transport Authorities and Railways. The function of the Commission will be to access the requirements of Inter-State Transport over a given period of time on the basis of careful economic and technical studies. For this the Committee should be equipped with adequate machinery to elicit information concerning traffic requirements.

Having decided the quantum of traffic requiring long distance inter-State permit, over a given period of time, the permits could be issued by the State Transport Authorities on behalf of the Inter-State Transport Commission. The number of permits to be issued by each state to its operators could be decided on some agreed principle of equity, such as, route mileage, volume of traffic originating etc.

For uninterrupted movement of the vehicles moving on long distance inter-State route, the Committee suggests that for these vehicles some common colour should be prescribed to be adopted throughout the country.

By putting through the above scheme, the Committee feels the scope for temporary permits will reduce considerably. Temporary permits should become an exception to be resorted to only for meeting special and short-term needs.

Regulation of Freights and fares

To make coordination between rail and road transport more effective, the State Legislation should clearly empower the State Transport Authorities to fix both the maximum and minimum fares and freights and also that there should be strict enforcement of these fares and freights. For better enforcement of this, the Committee feels that establishment of Association of Road Transport Operators, both at regional as well as state level, may prove useful.

Strengthening Road Transport.

With a view to improve the efficiency of the present road transport industry the Committee recommended reorganisation of the industry in three main directions.

1. Small operators should be helped to join together to form viable units;
2. Cooperative transport undertakings should be actively promoted as matter of public policy; and
3. It is essential to provide in the legislation for formation at the State and regional level of associations of transport operators with specific functions and responsibilities.

Financing Road Transport

The Committee has shown its concern, on the lack of facilities of finance in this sector. It has stated that unless banks and other financial institutions come forward to provide financing and refinancing facilities in a big way will not be possible to secure the development of road transport industry along sound lines or realise the measure of development envisaged for in the Fourth Plan. This is a problem of critical importance and dimensions as to demand the special attention of the Ministries of Transport and Finance and the Reserve Bank of India and the State Bank of India.

STATE PARTICIPATION

Passenger Transport

With the growth of towns and cities and more rapid development of the country side, the passenger transport services constitute a risk free highly profitable investment and essentially a public utility suitable for operation on public and semipublic basis. The Committee recommended increased participation of State, Municipal and Cooperative sector in this field and emphasised that the quality of management is the crucial factor in rapid development of road transport as public enterprise.

Goods Transport

The Committee recommended State participation in goods transport on the following grounds :—

1. to supplement the effect of private operators to transport goods,
2. to help in developing undeveloped regions (hilly and backward regions, where private operators are not willing to come forward,
3. It will help in reorganising, and in filling in the gap in the present road transport industry, and
4. public undertaking can facilitate the active participation of the railway in long distance goods transport by road and thus promote over all transport development.

FUNCTIONS PROPOSED BY THE COMMITTEE ON TRANSPORT POLICY AND CO-ORDINATION FOR THE THREE MAIN BODIES SUGGESTED BY THEM FOR ACHIEVING CO-ORDINATION

(1) *Transport Planning and Co-ordination Committee*

The existing Planning Committee on Transport, which guides the work of the joint Technical Group, should be reconstituted and should function as the Transport Planning and Co-ordination Committee. The Joint Technical Group for Transport Planning, which is undertaking studies and economic appraisals should be strengthened and should serve as a Technical Secretariat of the Transport Planning and Co-ordination Committee. The Committee should meet at regular intervals and consider reports and studies, prepared by the Joint Technical Group and Research Organisations in the Ministries of Railways, Transport and Civil Aviation as well as in the States.

(2) *Central Committee of Ministers for Transport*

To facilitate consideration of important question of policy and to provide guidance, from time to time, to the Transport Planning and Co-ordination Committee and other Ministries, the Committee suggested that the Prime Minister may constitute a Committee of Ministers, consisting of Ministers-in-charge of Railways, Transport and Civil Aviation, Minister of Industry, Minister of Planning, Minister of State in the Ministry of Finance, and Member of the Planning Commission in charge of Transports. The Prime Minister may appoint a member of the Committee to be the Chairman.

(3) *Council for Transport Coordination*

This body would be concerned with the general and overall problems of Coordination and, besides reviewing implementation of measures and policies pertaining to the Coordination of transport, would provide direction and guidance to the road transport industry and other interest as well as advise on programme of studies to be undertaken by the Joint Technical Group for Transport Planning, by research organisations in the Ministries and technical units established in the States. The Council would be composed of members of the Committee of Minister on Transportation at the Centre and State Ministers in-charge of Transport and Roads. The Council for Transport Coordination would supplement the work of the Transport Development Council specially in fields where considerations of policy demand united action between the Central and the States and the problems of transport sector as a whole have to be considered in their wider setting. The Chairman of the Committee Ministers would serve as Chairman of the Council for Transport Coordination.

ANNEXURE X

RESOLUTION OF CENTRAL ASSEMBLY RELATING TO CENTRAL ROAD FUND, 1929

1. There shall continue to be levied on motor spirit an extra duty of customs and of excise of not less than 2 annas per gallon, and the proceeds thereof shall be applied for the purposes of road development.

2 (i) From the proceeds of such extra duty in any financial year there shall be deducted a sum as near as may be equivalent to the share in such proceeds rising from taxed motor spirit used in aviation during the calendar year ending during the financial year concerned, and such sum shall be at the disposal of the Central Government for allotment as grants-in-aid of civil aviation.

(ii) The balance of the proceeds shall be credited as a block grant to a separate Road Fund.

(iii) For the purpose of this resolution taxed motor spirit shall mean motor spirit upon which the duty of customs or excise shall have been paid and in respect of which no rebate of such duty shall have been given.

3. (1) The Road Fund shall be allocated as follows :—

(a) a portion equal to twenty percent, shall be by the Central Government as a central reserve, this percentage being applicable with effect from the allocation due for the financial year 1940-49.

(b) Out of the remainder there shall be allocated by the Central Government a portion for expenditure in each State and Territory specified in the First Schedule to the Constitution as near may be in the ratio which the consumption of taxed motor spirit other than motor spirit used in aviation, in each area for which an allocation is to be made shall bear to the total consumption in the territory in India of taxed motor spirit, other than motor spirit used in aviation, during the calendar year ending during the financial year concerned.

(2) The portions allocated for expenditure in Part A States and Part B States shall be retained by the Central Government until they are actually required for expenditure in the manner herein after specified

(3) If in the opinion of the Central Government the Government of any Part A State or Part B State has at any time :—

- (a) failed to take such steps as the Central Government may recommend for the regulation and control of motor vehicles within the state, or
- (b) delayed without reasonable cause the application of any portion of the Road Fund allocated or re-allocated as the case may be for expenditure within the State.
- (c) the Central Government may resume the whole or part of any sum which it may at that time hold for expenditure in that State.

(4) All sums resumed by the Central Government from the account of any State Government as aforesaid shall be re-allocated between the credit accounts of State Governments and the reserve with the Central Government in the ratio of the main allocation for the financial year proceeding the year in which the allocation is made.

Provided that the sums so calculated as the share of the State from whose account the resumption has been made shall be credited to the reserve with the Central Government.

(5) Special additions to the Road Fund for financing particular projects may be accepted from sources other than that mentioned in para 2(2) which shall be kept in a Special Reserve and utilised for such projects

4. The balance to the credit of the Road Fund or of any allocation thereof shall not lapse at the end of the financial year.

5 No expenditure shall be incurred from any portion of the Road Fund save as here-in-after provided.

6 The Central reserve with the Central Government shall be applied first to defraying the cost of administering the Road Fund and thereafter upon such schemes for research and intelligence and upon such special enquiries con-

decided with roads and upon special grants-in-aid for such objects connected with road, as the Central Government may approve.

7. The sums allocated for expenditure in the States may, subject to the previous approval of the Central Government to each proposal made, be expended upon any of the following objects, namely:—

- (i) On the construction of new roads and bridges of any sort;
- (ii) On the reconstruction or substantial improvement of existing roads and bridges;
- (iii) In special cases, on the maintenance of roads and bridges, constructed, reconstructed or substantially improved from the Road Fund or from loans approved or sanctioned by the Central Government;
- (iv) to meet charges, including the cost of establishment connected with the preparation of schemes of road development or with the administration of State Boards of Communications;
- (v) to meet charges including the cost of establishment connected with control of motor transport; and
- (vi) on the interest and amortization of loans approved or sanctioned before the date of this Resolution by the Central Government, and spent or to be spent on the construction, reconstruction or substantial improvement of roads and bridges.

8. In considering proposals for the construction, reconstruction or improvements of roads and bridges from the Road Fund, the Central Government shall have regard to the present urgent need for improving the efficiency and reducing the cost of transport by road of agricultural produce to markets and railways.

*9 (1) A Standing Committee for Roads shall be constituted consisting of:—

- (a) the Minister-in-charge of Transport who shall be ex-officio Chairman, the Minister of State for Transport who shall be ex-officio Vice-Chairman, and the Minister of State for Parliamentary Affairs who shall be ex-officio member.
- (b) 15 members selected by the members of Parliament from themselves; and

(c) the Chief Commissioner of Railways.

(2) In the absence of the Chairman and the Vice-Chairman, the members present at any meeting may elect one of themselves to act as Chairman of the meeting.

(3) No approval to any proposal for expenditure from the Road Fund shall be given by the Committee unless it is supported by a majority of the members present and voting.

(4) All proposals for expenditure from the Central Reserve and all other proposals for expenditure from the Road Fund to be made in the State shall be referred by the Central Government to the Standing Committee before the proposals are approved:

Provided that the amounts in the Special Reserve shall be applied only to the purposes for which they are earmarked.

*10. The functions of the Standing Committee shall be:—

(a) To consider the annual budget and account of the Road Fund.

(b) To advise upon all proposals for expenditure from the Central Reserve;

(c) To advise upon the desirability of all other proposals involving expenditure from the Road Fund in the State.

(d) To advise upon proposals for the resumption of monies held by the Central Government as provided in subparagraph (3) of paragraph 3 of this Resolution; and

(e) To advise the Central Government generally on all questions relating to roads and road traffic which the Central Government may refer to the Committee.

*The Committee ceased to function after 1951-52 in accordance with a policy decision of the Government of India to discontinue all Standing Advisory Committee of Parliament.

APPENDICES I to III

APPENDIX I—(TRANSPORT TERMINOLOGY)

(a) TERMS IN AIR-TRANSPORT

1. *Passenger*
A person occupying a separate seat on a one-way trip.
2. *Passenger kilometre*
The transportation of one passenger over one kilometre.
3. *Available seat kilometres*
Seats available for the transportation of passengers multiplied by the kilometres flown on each inter-station flight.
4. *Passenger load factor*
Ratio of passenger kilometres flown to available seat kilometres.
5. *Tonne kilometre*
The transportation of one tonne of goods over one kilometre.
6. *Capacity available*
Load capacity available for the transportation of goods and passengers after deduction of the operating load of fuel and oil, crew, stewards, supplied etc. In other words, it is saleable transport capacity expressed in terms of weight. This is also termed as "Payload".
7. *Available tonne kilometres*
Available load capacity multiplied by kilometres flown over each inter-sector flight.
8. *Revenue weight load factor*
Ratio of revenue tonne kilometres performed to available tonne kilometres. This indicates capacity sold and capacity which could not be sold and was therefore, wasted.
9. *Passenger tonne*
The weight of a passenger (including free baggage viz. 20 k.g.) has been assumed to be .09 Tonne.

(b) TERMS IN RAIL TRANSPORT

1. Capital-at-charge

Capital-at-charge includes the capital outlay on worked lines but excludes that on railway manufacturing units and miscellaneous independent projects such as the Chittaranjan Locomotive Works, the Integral Coach Factory, the Diesel Locomotive Works, etc.

2. Working Expenses

Working expenses are the administrative figures of railway accounts representing true expenses of the railway system in an accounting period irrespective of whether the expenses have been disbursed. These are accordingly the sum total of the ordinary working expenses and the appropriation to the Depreciation Reserve Fund (and the Pension Fund from the 1st April, 1964 only); the amount of suspense and payments to worked lines are not included.

3. Net Revenue

Net revenue represents the net earnings during an accounting period after meeting all the Revenue charges except the payment of dividend and of the fixed contribution of Rs. 125 millions from 1961-62 onwards in lieu of tax on passenger fares to General Revenue for transfer to the States.

4. Gross Traffic Receipts

Gross traffic receipts are gross earnings plus/minus the variation from the previous year's figures and the current year's figures of earnings awaiting realization.

5. Operating Ratio

Operating ratio represents the percentage of working expenses to gross earnings.

6. Net tonne kilometres

Net tonne kilometres means the movement over a distance of one kilometre on each gauge of the homeline of the tonne of goods originating on each gauge of the railway, tonnes received from non-Government Railways, ferries or steamers and Railways in foreign countries, from the same gauges of other Government railways and from other gauges of the home railways.

7. Tonnes originating

Tonnes originating includes tonnes of all traffic originating on each gauge of the Government Railways system, whether these terminate on the gauge itself or on some other gauge of any railway (home or foreign). Each tonne of freight is counted once only on the originating railway irrespective of the number of gauges over which it is carried.

8. Route kilometres

Route kilometres represent the kilometrage of Railwayline owned by a Railway including its worked lines. Only single kilometrage of double lines and more than double lines is included. The kilometrage of tracts, crossings at stations and sidings is excluded.

9. Four-wheelers

Wagons are counted in terms of four-wheelers as under:—

1 six wheeler	= 1 four-wheeler
1 bogie	= 2 four-wheelers
1 Twelve-wheeler	= 3 four-wheelers
A bogie open high capacity B.G. wagon BOBX type (combined central and side discharge)	= 3 four-wheelers
A bogie open high capacity B.G. wagons BODX type (side discharge and inclined floor)	= 3 four-wheelers
A bogie wagon BCX type carrying capacity 55.37 tonnes	= 2 four-wheelers
A bogie Hopper wagon B.G. KOH/BKH Non IRS type carrying capacity 65 tonnes	= 3 four-wheelers
A bogie open high sided B.G. wagon of high capacity BOX type	= 2½ four-wheelers
A bogie ballast hopper B.G. wagons BOB type	= 2½ four-wheelers
A bogie wagon BWL type carrying capacity 50 tonnes	= 2 four-wheelers
A bogie wagon BWT type carrying capacity 55 tonnes	= 2½ four-wheelers
A bogie wagon BWH type carrying capacity 90 tonnes	= 4 four-wheelers
A bogie wagon BWS type carrying capacity 130 tonnes	= 6 four-wheelers
A bogie rail high capacity B.G. wagon BRS/BRH type	= 2½ four-wheelers
A bogie open "Gondola" B.G. wagon of high capacity BOI type for iron ore	= 2 four-wheelers

10. Vehicle Kilometres per vehicle day

Vehicle kilometres per vehicle day denote the average number of kilometres run per coaching vehicle per day both loaded and empty journeys. Vehicle kilometres of coaching vehicles run on passenger and mixed trains are divided by the average number of passenger and other coaching vehicles on line multiplied by the number of days in the period concerned. Performance of coaching vehicles run on departmental trains and brake vans does not enter into the calculation of this result.

11. Wagon Kilometres per wagon day

Wagon kilometres per wagon day represent the average daily performance of a wagon in kilometres both loaded and empty journeys, and are arrived at by dividing total wagon kilometres by the average number of wagons on line (pooled and non-pooled) by the number of days in an accounting period. The performance and days of the departmental wagons and other stock excluded from the line figure are not taken into account in calculating this result.

Broad gauge : 1.676 metres.

Metre gauge : 1.000 metre.

Narrow gauge : 0.762 metre and 0.610 metre.

(c) TERMS IN MOTOR TRANSPORT

1. MOTOR VEHICLE REGISTRATION

Motor vehicle registered means that a certificate to the effect that a motor vehicle has been duly registered by a competent authority in accordance with the provisions of Motor Vehicles Act has been issued. The Act provides that no person shall drive any motor vehicle and no owner of a motor vehicle shall cause or permit the vehicle to be driven in any public place or in any other place for the purpose of carrying passenger or goods, unless the vehicle is registered and the certificate of registration of the vehicle has not been suspended or cancelled and the vehicle carries a registration mark displayed in the prescribed manner.

2. Motor Vehicle

Motor vehicle means any mechanically propelled vehicle adapted for use on road whether the power of propulsion is transmitted thereto from an external or internal source and includes a chassis to which a body has not been attached and a trailer; but does not include a vehicle running on fixed rails or a vehicle of a special type adapted for use only in a factory or in any other enclosed premises.

3. Public Service Vehicle

Public service vehicle means any motor vehicle used or adapted to be used for the carriage of passengers for hire or reward and includes a motor cab, contract carriage, and stage carriage.

4. *Goods Vehicle*

Goods vehicle means any motor vehicle constructed or adapted for use for the carriage of goods, or any motor vehicle not so constructed or adapted when used for the carriage of goods solely or in addition to passengers.

5. *Motor Cab*

Motor cab means any motor vehicle constructed, adapted or used to carry not more than six passengers excluding the driver, for hire or reward.

6. *Motor Car*

Motor car means any motor vehicle other than a transport vehicle omnibus, road-roller, tractor, motorcycle or invalid carriage.

7. *Motor Cycle*

Motor cycle means a two-wheeled motor vehicle, the unladen weight of which, inclusive of the unladen weight of any detachable side car, having an extra wheel, attached to motor vehicle, does not exceed 600 kilograms.

8. *Trailer*

Trailer means any vehicle other than a side-car drawn or intended to be drawn by a motor vehicle.

9. *Fleet Size*.—The vehicles of various types held by an Organisation for operation, including those proposed to be scrapped but not actually scrapped from its fleet.

10. *No. of Vehicles in scheduled services*.—Number of vehicles of each type in Scheduled and extra services as per Time Tables in force come under this category.

11. *No. of Buses under Repairs*.—

(i) *Major Repairs*.—The repairs usually coming under the purview of the Divisional Regional and Central Workshops are reckoned as major repairs. Vehicles under such repairs are said to be under major repairs.

(ii) *Minor Repairs*.—The repairs usually coming under the purview of depots and garages are reckoned as minor repairs and vehicles under such repairs are said to be under minor repairs.

12. *Traffic stops*.—These refer to the number of vehicles held by an organisation after deducting from the fleet the vehicles in scheduled services, and major and minor repairs and those routing periodical inspections.

13. *Payor and statistics (in Kms).—*

- (i) *Remunerative Kms.*—Total remunerative Kms. operated by vehicles.
- (ii) *Dead-end Kms.*—Total non-remunerative Kms. operated by the passenger buses. This refers to such type of Kms. as operated by a vehicle from a Depot or Garage to road, refuelling point, or that operated by relief vehicles in case of breakdowns etc. The Kms. operated by the vehicles transferred from one unit to other unit for expansion or such other purposes are also to be considered as dead kms.
- (iii) *Gross Kms.*—Total of remunerative and dead Kms.
- (iv) *Departmental Kms.*—The Kms. operated by the bus or truck or any other departmental vehicle on account of departmental work other than normal operation, such as carriage of stores or fuel, survey work, inspection etc. constitutes departmental kilometres.

14. *Break down.*—Stoppage of a vehicle on the road due to mechanical defect for which time to re-start is 30 minutes in the case of the inter-city service and 15 minutes or more in the case of city service, is taken as a breakdown.

15. *Accidents:—*

- (i) *Major*—Accidents involving death or grievous bodily injury and or loss of and damage to property exceeding Rs. 500 (while reporting accidents under this head, fatal accidents should also be included in the return).
- (ii) *Minor*—Accidents involving simple bodily injuries or loss of and or damages to property exceeding Rs. 50 but not exceeding Rs. 500.
- (iii) *Trifling.*—All other accidents.

16. *Punctuality*—Trips delayed by more than 15 minutes in inter-city service and 5 minutes in city services are to be considered 'delayed'.

17. *Gross Revenue:—*

- (i) *Traffic*—To represent earnings realised from (a) passengers, (b) casual contracts, (c) reservations, (d) parcel service and (e) luggage carried in the case of passenger operations; earnings from (a) scheduled services; (b) chartered services, (c) contract services as also charges from (a) demurrage and (b) wharfage in the case of goods operations and earnings from fare in the case of taxi operations.
- (ii) *Others*—To represent the revenue from (a) sale of scrap, (b) advertisement, (c) out agency services, (d) postal receipts and (e) miscellaneous receipts.

18. *Cost of Operations*.—It will include actual expenditure on personnel, material, depreciation, interest on capital and overheads. The cost of material purchased during the period under report has not to be mistaken with the cost of actual consumption during that period.

19. *Load Factor*.—It is the ratio of seat Kms. occupied to seat Kms. offered during a period by an undertaking. Alternatively, it is the ratio of actual earnings to expected earnings. Earnings from passenger journeys will only be included, leaving the earnings from luggage, mails, etc.

20. *Cost of personnel*.—Location is to be the deciding factor, for example, the cost of staff whether supervisory, executive or clerical working in workshop would be debited to the head "Maintenance & Repairs" and not under the head "Administration". This criteria will also be used in working the vehicle staff ratios.

(d) TERMS IN PORT TRANSPORT

1. *D.W.T. (Dead Weight Tonnage)*.—It is the weight in long tons of cargo, passengers, fuel and stores which a ship carries when fully loaded down to the load line. It represents the actual carrying capacity of a ship.

2. *G.R.T. (Gross Registered Tonnage)*.—It is the entire cubical capacity of a ship.

3. *N.R.T. (Net Registered Tonnage)*.—The cubic capacity of a ship intended for revenue carrying. 100 Cu. ft. is the standard space taken as the accommodation for one ton of goods.

4. *Berth-day*.—A day of occupations of a berth (quay or Mooring) by a ship.

5. *Ship-day*.—A day spent in the harbour by a ship.

6. *Turn-round time*.—Time spent by ship in the process of entering port, discharging cargo, re-loading and leaving.

7. *Ship-day lost*.—A day lost by a ship delayed (on account of non-availability of berth).

8. *Light-dues*.—A levy of the Lighthouses, Department on a ship entering an Indian port.

9. *Port dues*.—A levy of port authority on a ship.

10. *Pilotage*.—A port charge for guiding a ship in or out of a harbour through channels, passages or other waters by an authorised pilot.

11. *Berth-fees*.—A port charge on ship for the occupancy of a

12. *Wharfage*.—A port charge on the ship for all cargo conveyed on board or through a wharf/berth. It is called harbour dues, in Madras and landing in Visakhapatnam.

13. *Craneage*.—The hire charges for providing a port crane for cargo handling.

14. *Lightrage*.—The charges of the owner of barges and lighters for the transshipment of a ship's cargo in the stream (instead of alongside berth).

15. *Traffic Flow*.—A vector with magnitude and direction, such as passengers embarked/dismarked or cargo exports/imports.

16. *Traffic*.—A scalar with only magnitude but no direction such as the sum total of exports and imports of cargo.

17. *Cargo traffic at ports*.—Excludes bunker coal; and bunker oil, unless otherwise stated.

18. *Output-rate of labour*.—Cargo-handling rate of port or dock labour per shift of 8 hours (excepting Bombay Port where it is taken for 7 hours) for hook gang.

19. *Output per berth day*.—Total tonnage handled distributed over the total number of berth days.

20. *Jetty and bunker*.—It is a port facility for a ship in unprotected water with a landing facility and assured draft.

21. *Mooring*.—It is a port facility with assured draft but no landing facility.

22. *Berth*.—It is port facility with assured draft and landing facility.

(c) TERMS IN SHIPPING

- | | |
|-------------------------------|--|
| 1. <i>Load Line</i> | The outer line on the body of a ship upto which she can submerge in water with safety. It varies according to the seasons and waters in which she plies. |
| 2. <i>Draft</i> | The depth necessary to submerge a ship to her load line. |
| 3. <i>Displacement light</i> | The weight of a ship without stores, bunker fuel or cargo. |
| 4. <i>Displacement Loaded</i> | The weight of a ship plus stores, bunker fuel, cargo and passengers. |

5. *Cargo tonnage* It refers to the earning cargo of a ship and is expressed as either a weight or measurement. The weight ton in the USA is the short ton of 2000 pounds (or 40 cubic feet) in the British countries the long ton of 2240 pounds (or 40 cubic feet), and under the metric system in India the metric ton of 1000 kg., or cubic metre.
6. *Ballast* Any material intended to provide stability to the ship.
7. *Bunker* Ship-space for storing fuel (coal, oil etc.).
8. *Liners* Ships that ply on a regular scheduled service between groups of ports. The ship of a liner company are common carrier offering cargo space or passenger accommodation to all shippers and passenger who require them. A liner company is generally engaged on trade routes where large volume of passenger or cargo traffic is available.
9. *Freighters or cargo lines* Ships designed to carry general cargo (with a limited passenger accommodation operating on fixed routes with fixed sailing schedules and serving a group of ports.
10. *Tramps (or general traders)* Cargo ships operating in all parts of the world without a fixed route and sailing schedule in search of primarily bulk cargo carried generally in ship-loads.
11. *Tanker* A specialised cargo ship designed to deal with bulk liquid cargoes permitting quick loading and discharge, thereby ensuring fast turn-rounds so essential to good utilisation. They generally return in ballast as it is seldom possible to obtain return cargoes.
12. *Oil Ore and bulk carrier* A bulk cargo ship designed to carry ore and oil enabling her thereby to be loaded in both directions.
13. *Collier* Generally a coastal ship designed to carry coal.

14. *Coaster* An all purpose cargo carrier, operating around our coasts. Both coasters and colliers are subject to serve completion from inland transport.
15. *Roll-on roll-off vessel* It is frequently called a vehicle ferry. It is designed for the conveyance of road haulage vehicles and private cars. At each terminal ports, a ramp or link span is provided enabling the vehicle to drive on or off the vessels, thereby eliminating craning and cargo handling (and also pilferage) and permitting a quick turn-round of the ship.
16. *A liner Conference* An organisation whereby a number of ship-owners offer their services on a given sea route on conditions agreed by the members. A conference line is a vessel of a ship-owners belonging to such a shipping conference.
17. *Voyage and Time charter rates* A voyage charter is a contract for a specific voyage, while a time charter is for a period of time which may cover several voyages. A voyage charter rate is thus a short term rate and time charter rate is a long term rate.
18. *Stowage factors* Stowage factor is the space occupied in cubic feet in the ship's hold by one ton of cargo (2240 lbs.).
- Stowage plan is an outline plan of the ship upon which is entered the stowage position of all cargo. It helps the stevedore in charge of the discharging and loading and responsible to the Master of the ship to make stowage arrangements in advance. The stowage factors for certain commodities may be given as follows :

	Nature of packing	Stowage factor	Ship-type to which suitable for carriage
(1)	(2)	(3)	(4)
Apples	Cases or barrels	About 80	Fruits carriers/cargo liners.

(1)	(2)	(3)	(4)
2 Butter	Cases, boxes, or bags	55=60	Cargoliners with refrigeration facility.
3. Cement	Bags, containers, or in bulk.	35=40	Most suitable for single deck vessels.
4. Coal	..	35=50	Tramps/coast-wise colliers vessels with single deck, large hatches and self trimming holds.
5. Coffee	Bags/chests	60	Cargo liners.
6. Confectionary	Cartons	High stowage factor	Liner services.
7. Copra	Bales/Bags/Bulk	75=80	Shelter deck vessels.
8. Cotton	Pressed Bales	50=100	Shelter deck vessels.
9. Eggs	Crates/cases	High stowage factor.	Vessels with refrigerator accommodation.
10. Esparte grass	Bales	100=150	Shelter deck vessels.
11. Fertilisers	Bulk/Bags	Varies with variety.	Single deck vessels when conveyed in bulk and tween deck vessels when despatched in bags.
12. Flour	Bags	50	Tween deck vessels.
13. Heavy grain (Wheat malet & rye)	(1) Bulk (2) Bags	Approx 50 (50+10% for bags).	Single deck vessels with self-trimming holds Do.
14. Lightergrains (barely, oats & linseed).	(1) Bulk (2) Bags	55+85 55-85+10% for bags.	Single deck vessels with self trimming holds. Do.
15. Jute	Bales	58	Liners.
16. Oilcakes	Bulk/Bags	55	Single deck vessels when carried in bulk, tween deck ships when despatched in bags.

(1)	(2)	(3)	(4)
17. Oranges . . .	Crates	About 65-75	'Tween deck vessel
18. Ores . . .	Bulk	12-30	Trams/specialised single deck ore carriers.
19. Rice . . .	Bags	50	'Tween deck vessel
20. Rubber . . .	Bags/bales/cases	65-75	Liners (Latex in deep tanks)
21. Salt . . .	Bulk/Bags	35	Single deck vessels
22. Steel Rails . . .	Loose/Bundles	12	Single deck vessels when despatched in bulk consignment. Cargo liners when despatched in small consignments.
23. Sugar . . .	Bulk (raw) Bags (raw & refined).	40-50	Single deck sugar carriers when despatched in bulk 'tween deck vessels when in bags.
24. Tea . . .	Lined Cases	About 65	Liner tonnage.
25. Timber, Hard-woods (Teak and Mehegany Pit props) DBB (Doels, Battens & Boards)	...	35-30 60 About 90	Single deck three island-type with well decks and abroad beam.
26. Tobacco . . .	Hogs/heads/Bales/Cases	...	'Tween deck vessels.
27. Wines . . .	Drums/Barels	...	Cargo liners.
28. Wool . . .	Pressed bales large bags.	180-280	Shelter deck vessel.

APPENDIX II

SELECTED TECHNICAL PAPERS RELATING TO ROADS PUBLISHED BY THE INDIAN ROADS CONGRESS

Sl. No.	Name of Paper	Name of Author	I.R.C. Journal No.
(1)	(2)	(3)	(4)
<i>I. Roads in General</i>			
1.	Safe Wheel Load for Indian Roads	Raja Ram	III**
2.	Corrugations on Road Surfaces	G.B.E. Trustcott	IV**
3.	Ribbon Development	A.S. Trollip	V**
4.	The board Classification of Traffic and Contributory Causes of Wear and Tear of Roads.	Sir Kenneth Mitchell	VIII**

XL. SELECTED PAPERS OF I.R.C. ON SPECIFICATIONS STANDARDS, CODE OF PRACTICES ETC.

A. Highway Kilometre Stones, Sign, Boards Etc.

1. Type Designs for Highway Milestones (IRC : 1—1953 First Repr int).
2. Route Marker Signs for National Highways (in Metric Units) (IRC 2—1968 First Revision).
3. Type Designs for Furulong and Boundry Stones (IRC : 4—1955).
4. Type Designs for Highway Kilometres Stones (IRC : 8—1969 First Revision).
5. Type Designs for Boundry Stones (IRC : 25—1967 in Metric Units).
6. Type Designs for 200-Metre Stones (IRC : 26—1967).
7. Standard Letters and Numerals of Different Heights for Use of Highway Signs (in Metric Units IRC : 30—1968).
8. Route Marker Signs for State Routes (in Metric Units IRC : 31—1969).
9. Standard for Vertical and Horizontal Clearances of Overhead Electric Power and Telecommunication Lines as Related to Roads (in Metric Units IRC : 32—1960).
10. Code of Practice for Road Markings (with Paints IRC : 35—1970)
11. Traffic sign (in Metric units)

B. Bridges and Culverts

1. Standard Specifications & Code of Practice for Road Bridges Section I—General Features of Design (in M-KS—4th Revision IRC : 5—1970).
2. Standard Specifications & Code of Practice for Road Bridges Section II—Loads and Stresses (In Metric Units) (Second Revision IRC : 6—1966)
3. Recommended Practice for Numbering Bridges and Culverts (IRC : 7—1959).
4. Design Criteria for Prestressed Concrete Road Bridges (Post-Tensioned Concrete) (First Revision IRC : 18—1965).

5. Standard Specifications & Code of Practice for Road Bridges—Section III—Cement Concrete (Plain and Reinforced IRC : 12—1966).
6. Standard Specifications & Code of Practice for Road Bridges—Section V—Steel Road Bridges (IRC : 24—1967).
7. Standard Specifications and Code of Practice for Road Bridges Section IV—(Brick Stones & Block Masonry IRC : 40—1970).
8. Paper No. 167—"Design of Small Bridges & Culverts" by Govindhan Lal.
9. Paper No. 238—"Considerations in the Design & Sinking of Well Foundations for Bridges Piers" by B. Balwant Rao & C. Muthuswamy
10. Bridge Loadings Round the World.
11. Modern Trends in the Design and Construction of Prestressed Concrete Bridges Around the World.
12. Bridging India 'Piers' Volume I.

C. Cement Concrete Roads

1. Standard Specifications & Code of Practice for Construction of Concrete (IRC : 15—1970).
2. Tentative Specifications for 4 cm. ($\frac{1}{2}$ in.) Asphaltic Concrete Surfaces Course. (IRC : 29—1968).

D. Black Top Roads

1. Tentative Specifications for Priming of Base Course with Bituminous Primers. (IRC : 16—1965).
2. Tentative Specifications for Single Coat Bituminous Surface Dressing (IRC : 17—1965).
3. Recommended Practice for Bituminous Penetration Macadam (Full Group IRC : 20—1966).
4. Tentative Specification for Two Coat Bituminous Surface Dressing (IRC : 23—1966).
5. Tentative Specifications for Bituminous Macadam (Base & Binder) Course (IRC : 23—1967).

E. Water Bound Macadam Roads

1. Standard Specifications and Code of Practice for Water Bound Macadam and Surface Treated Water Bound Macadam (First Reprint) (IRC : 19—1966).

F. Traffic Census Surveys

1. Traffic Census on Non-Urban Roads (IRC : 1960).
2. Standard Procedure for Evaluation and Condition Surveys of Stabilised Soil Roads. (IRC : 33—1969).

G. Wayside Amenities

1. Recommended Practice for Location and Layout of Roadside Motor Fuel Filling and Servicing Stations (First Revision IRC : 12-1-1967).
Out—recopy (Words omitted).
2. Recommended Practice for Borrowpits for Road Embankments Constructed by Manual Operation (First Reprint IRC : 10—1961).
3. Recommended Practice for the Design and Layout of Cycle Track (IRC : 11—1962).
4. Tentative Specifications for the Construction of Stabilised Soil Road with Soft Aggregate in Areas of Moderate and High Rainfall (IRC : 2—1967).
5. Recommendations for Road Construction in Waterlogged Areas. (IRC : 34—1970).
6. Recommended Practice for the Construction of Earth Embankments for Road Works (IRC : 26—1970).
7. Guidelines for the Design of Flexible Pavements. (IRC : 37—1970).
8. Design Tables for Horizontal Curves for Highways. (IRC : 38—1970).
9. Standards for Road-Rail Level Crossings. (IRC : 39—1970).
10. A Policy on Roadside Advertisement.
11. Geometrics of Roads.
12. Road Drainage Practices Around the World.
13. A Policy on Roadside Advertisement.

APPENDIX III

(1) IMPORTANT MEASURES AND CONVERSIONS

NOTE — Measurements by weight would be of interest to the port while measurements by volume to the ships.

Weight

1 Tonne	=0.98420 long ton.
1 Long ton	=1.10231 short tons
1 Long ton	=1.01605 Tonnes
1 Short ton	=0.90718 Tonnes

Linear

1 Kilometre	=0.62137 Mile
1 Mile	=1.6093 kilometres
1 Cm.	=0.393701 inch
1 Inch	=2.54 cms.

Area

1 Squarekilometre	=0.38610 square mile
1 Squarekilometre	=100 hectares
1 Hectare	=2.471 acres

Volume

1 Cubic Metre of distilled water	=1 Tonne (by weight) =1000 litres of water (by volume) =35.31 cubic feet.
1 Gallon	=4.546 litres.
1 Bale of cotton lint (392 lbs)	=0.17781 Tonne of cotton lint
1 Tonne of cotton lint	=5.624 bales of cotton lint (392 lbs.)
1 Bale of jute (400 lbs)	=0.181486 Tonne of jute
1 Tonne of jute	=5.5116 bale of jute (400 lbs.)

(2) CONVERSION RATIOS BETWEEN AGRICULTURAL RAW MATERIALS AND PROCESSED PRODUCTS

Rice

Rice(cleaned) production . . . = 2/3 of paddy production.

Cotton

Cotton lint production . . . = 1/3 of kapas production.

Cottonseed production . . . = 2/3 of kapas production.

Cottonseed production . . . = 2 times of cotton lint production

Jute

100 yards of hessian . . . = 54 lbs of raw jute.

4148 yards of hessian : . . . = 1 ton of raw jute.
= 5.6 bale of raw jute of 400 lbs each).

1 ton of sacking . . . = 1.11 tons of raw jute.
= 6.22 bales of raw jute (of 400 lbs. each).

1 ton of hessian, sacking, e.t.c. . . = 1.05 tons of raw jute.
= 5.9 bales of raw jute (of 400 lbs. each).

Groundnut

Kernel to nuts in shell . . . = 70%

Oil to nuts in shell . . . = 28%

Oil to kernels crushed . . . = 40%

Cake to kernels crushed . . . = 60%

Mustard

Oil to seeds crushed . . . = 33%

Cake to seeds crushed . . . = 67%

Seed

Oil to seeds crushed . . . = 37%

Cake to seeds crushed . . . = 63%

Coffee seed

Oil to seeds crushed	= 14 to 18%
Cake to seeds crushed	= 82 to 86%

Copra

Copra to nuts	= 1 ton of copra = 5773 nuts
Oil to Copra crushed	= 62%
Cake to copra crushed	= 33%

Cashew nut

Cashew kernel	= 25% of cashew nuts.
-------------------------	-----------------------

Lac

Seed lac	= 66-68% of stick lac
Shellac	= 37-4% of stick lac or 67-68% of seed lac

AGRICULTURAL RAW PRODUCTS
